Welcome

亚马逊云科技

NWCD operating Ningxia Region
Sinnet operating Beijing Region

Welcome to Getting Started with Amazon Web Services in China. This guide provides information and resources to help you start computing with Amazon Web Services in China. Here you'll find instructions for setting up your Amazon Web Services in China account, links to service guides, information on the Amazon Command Line Interface and SDKs, ideas for building solutions, and links to support and other resources. If you're new to Amazon Web Services in China, this is the place to start.

This guide also documents differences between the Amazon Web Services in China as currently implemented and as described in other product guides. Amazon Web Services operates in different Regions around the world, and some services vary by Region. To learn more about the implementation of services in these Regions and any regional differences that may exist, see the Region Table and Documentation by Service.

Again, welcome to the Getting Started guide, and welcome to Amazon Web Services in China.
What Is Amazon Web Services in China?

Amazon Web Services in China is the implementation of Amazon Web Services in the Beijing and Ningxia (China) Regions. Directly connected to domestic telecommunication networks, it's designed to provide the infrastructure and network services necessary to support Amazon technology.

Amazon Web Services in China provides computing resources and services that you can use to quickly and cost-effectively build applications. For example, you can rent a virtual server on Amazon Web Services in China that you can connect to, configure, secure, and run just as you would a physical server. But the virtual server runs on top of a global network managed by Amazon, and you pay for your virtual server only while it runs. Backed by Amazon Web Services in China, your virtual server can do things no physical server can, such as automatically scaling into multiple servers when demand increases.

Using Amazon Web Services in China to build your Internet application is like purchasing electricity from a power company instead of running your own generator, and it provides many of the same benefits: capacity exactly matches need; you pay only for what you use; economies of scale result in lower costs; and the service is provided by a vendor experienced in running large-scale networks.

You can run nearly anything on Amazon Web Services in China that you would run on physical hardware: websites, applications, databases, mobile apps, email campaigns, distributed data analysis, and media storage. The services are designed to work together so that you can build complete solutions, and many of the most utilized Amazon products are available in the China Regions.

The following topics will help you get started with Amazon Web Services in China.

Topics

- Managing Amazon Web Services in China
- Signup, Accounts, and Credentials
- Billing and Payment
- Using the Console

Managing Amazon Web Services in China

There are several tools that you can use to create and manage Amazon Web Services in China resources.
• **Amazon Web Services Management Console** – A graphical user interface that you access online at [https://console.www.amazonaws.cn](https://console.www.amazonaws.cn). The Amazon Web Services Management Console is the fastest way to get started with Amazon Web Services in China; there is nothing to install. Some services, however, have features that can't be accessed from the console. For more information, see [Using the Console](https://console.www.amazonaws.cn) or [the service documentation](https://console.www.amazonaws.cn).

• **Amazon Command Line Interface (Amazon CLI)** – A text-based tool that you install on your desktop. With the Amazon CLI, you can manage and script against multiple Amazon Web Services in China resources directly from the command line. Some services also offer custom CLIs. For more information, see [Amazon Command Line Tools](https://console.www.amazonaws.cn).

• **Software Development Kits (SDKs)** – Class libraries and tools that you add to your application so it can manage Amazon Web Services in China resources. Amazon offers SDKs in a variety of programming and scripting languages. The SDKs are the easiest way to write applications that interface with Amazon Web Services in China; they provide functions that you can call to authenticate your application's connection to Amazon Web Services in China. For more information, see [Amazon SDKs](https://console.www.amazonaws.cn).

• **Query APIs** – Low-level APIs that are exposed online through service- and Region-specific endpoints (for example, [https://dynamodb.cn-north-1.amazonaws.com.cn](https://dynamodb.cn-north-1.amazonaws.com.cn) for the Beijing Region, and [https://dynamodb.cn-northwest-1.amazonaws.com.cn](https://dynamodb.cn-northwest-1.amazonaws.com.cn) for the Ningxia Region). You call API actions by using HTTP requests. The APIs reflect the latest functionality of each service. If your application uses the API instead of an SDK, however, you must implement the functionality to generate the proper signatures to authenticate your requests.

### Signup, Accounts, and Credentials

To use Amazon Web Services in China services, you need an account and credentials specific to Amazon Web Services in China, the suite of Amazon Web Services available in the Beijing and Ningxia (China) Regions. Accounts created for other Amazon Regions won't work for Amazon Web Services in China. Similarly, Amazon Web Services in China accounts won't work in Amazon Regions outside the Beijing and Ningxia Regions. To use services in another Region, Amazon Web Services in China customers need to sign up for an account in that Region.

To comply with Chinese law and regulations, Amazon Web Services in China customers who want to make content publicly available via Amazon Web Services in China services are required to first file for Internet Content Provider (ICP) recordal with the Ministry of Industry and Information Technology. Until ICP recordal is complete, Amazon Web Services in China customers are granted...
Getting Started with Amazon Web Services in China

an Internal Access Account, which provides limited access to Amazon Web Services in China features. Amazon Web Services in China customers who don't intend to publish content publicly aren't required to complete ICP recordal. These customers can get started right away by signing up for an Internal Access Account and using Amazon Web Services in China services for personal projects or for projects internal to their organization. To use all of the Amazon Web Services in China features, customers need a Full Access Account. The two account types are described in more detail below.

Signup

The Amazon Web Services Management Console walks you through the process of signing up for Amazon Web Services in China. The steps below provide a high-level overview of signup.

To sign up for Amazon Web Services in China:

1. Go to www.amazonaws.cn and register with Amazon Web Services in China.
2. Receive an Internal Access Account.
3. (Optional) Complete the ICP recordal process. This step is necessary for publishing content for public consumption. When you've completed ICP recordal, you'll receive a Full Access Account.
4. Receive your Amazon Web Services in China account credentials. The credentials consist of an account ID, access key ID, and secret access key. Note that you can't use your Amazon Web Services in China credentials to access any other Amazon Region.

Internal Access Account

An Internal Access Account provides limited access to Amazon Web Services in China services. Internal Access Accounts are granted to Amazon Web Services in China customers who don't intend to host public content directly from their Amazon Web Services in China accounts, and to customers who want to host public content but have not yet completed ICP recordal. With Internal Access Accounts, public access is restricted as follows:

• In Amazon EC2, all common internet ports (except ports 22 and 3389) are blocked. Internal ports remain available.
• In Amazon S3, buckets are not allowed to serve content for public anonymous access, and pre-signed URL functionality is disabled.
Full Access Account

Full Access Accounts are granted to Amazon Web Services in China customers who have completed ICP recordal. A Full Access Account provides full access to Amazon Web Services in China features.

IAM Credentials

To use the Amazon Web Services in China console, you must have credentials provided by Amazon Identity and Access Management (IAM). All users have to create IAM credentials during the sign-up process. When you first sign up for Amazon Web Services in China, you create an IAM user administrator. Then you can sign in to the Amazon Web Services in China console with your account ID.

The administrator has full access to manage Amazon Web Services in China resources. For example, as the administrator, you can create additional IAM users by using the Amazon Web Services in China console. You can then manage users and their permissions by assigning them to groups. For more information about users, groups, and policies, see Working with Users and Groups. To learn more about IAM and about credentials in Amazon Web Services in China, see Amazon Identity and Access Management.

If you forget your IAM user password, you can reset the password from the Amazon Web Services Management Console. Amazon will send a password reset link to the email address that is associated this Amazon account. If you don't have access to that email, contact your administrator.

To reset your IAM user password:

- Use your Amazon account ID or alias to begin signing in to the Amazon Web Services Management Console at https://console.amazonaws.cn/.
- Choose Forgot password?.
- If necessary, enter your account ID and user name. Then provide the CAPTCHA text and choose Send email.
- Check the email that is associated with your Amazon account for a message from Amazon Web Services. The email will come from an address ending in @amazonaws.cn. If you don't see the email in your account, check your spam folder. If you no longer have access to the email, contact your account administrator. If you are the administrator, contact Amazon Web Services Support Center.
- Follow the directions in the email to reset your password. If your administrator has enabled an account password policy, you must meet those complexity requirements.
AWSBillingReadOnlyAccess If you receive an error, contact your administrator to learn about your specific requirements. For more information, see Setting an Account Password Policy for IAM Users in the IAM User Guide.

Close Account

Use the Amazon Web Services Management Console to close your Amazon Web Services account in China. The steps below provide a high-level overview.

If you close the account that you're using for the Amazon Firewall Manager administrator, Amazon and Firewall Manager handle the closure as follows:

Amazon Web Services revokes the account's administrative access from the service and deactivates any policies that were managed by the administrator account. The protections that were provided by these policies are stopped across the organization.

- Before closing your account, back up and then delete your policy data and other account resources. You will no longer have access to them after you close the account.
- The account resources are subject to the policies of Amazon Web Services operating partners: Sinnet in the China (Beijing) Region and NWCD in the China (Ningxia) Region. Account closure procedures in China might take longer than in other Amazon Web Services Regions.
- For more information, see Closing an account.

You can close your Amazon Web Services account using the following procedure.

To close your Amazon Web Services account

1. Sign in as the root user of the account that you want to close, using the email address and password that are associated with the account.
   
   If you sign in as an Amazon Identity and Access Management (IAM) user or role, you can't close an account.
2. On the navigation bar in the upper-right corner, choose your account name (or alias), and then choose My Account.
3. On the Account Settings page, scroll to the end of the page to the Close Account section. Read and ensure that you understand the text next to the check box. After you close an Amazon Web Services account, you can no longer use it to access Amazon services.
4. Select the check box to accept the terms, and then choose Close Account.
5. In the confirmation box, choose Close Account.

**Billing and Payment**

Amazon Web Services in China is priced and billed in local currency (CNY). Each month, Amazon Web Services in China sends an invoice to the email address of the account owner. You can also view your Amazon Web Services in China bill on the Bills page of the Amazon Billing and Cost Management console. You use Amazon Web Services in China resources first and then receive an invoice based on usage. You can then pay using either wire transfer or Corporate Bank Redirect.

Note that some features described in the Amazon documentation might not be available in the current Amazon Web Services in China release.

Unavailable features in the billing console include:

- Payment profiles

In the case of Amazon Billing and Cost Management, the free pricing tier is included in the China (Ningxia) Region.

**Amazon Cost Explorer**

Cost Explorer is a tool that enables you to view and analyze your costs and usage. You can view data for up to the last 12 months to forecast how much you're likely to spend for the next 3 months.

Some feature APIs listed under Amazon Cost Explorer API are currently not available in the China Regions. Unavailable features include:

- Account name dimension in Cost Category Rules.
- Chatbot feature is not available for Amazon Cost Anomaly Detection

**Service Endpoint**

Amazon Cost Explorer API in China provides the following endpoints:

- https://ce.cn-northwest-1.amazonaws.com.cn
Getting Started with Amazon Web Services in China

For more information in the API reference and User Guide, see Amazon Billing and Cost Management

Amazon Budgets

You can use Amazon Budgets to plan your service cost and usages, as well as reservation coverage and utilizations. With Amazon Budgets, you can receive alerts when your cost and usage exceeds your defined threshold, or is forecasted to exceed thresholds.

Some feature APIs listed under Amazon Budgets are currently not available in the China Regions. Unavailable features include:

- Service Control policies (SCPs) budget action type
- Legal entity and invoicing entity dimension filters

Service Endpoint

Amazon Budgets API in China provides the following endpoints:

- https://budgets.amazonaws.com.cn

For more information in to find the API reference and User Guide, see Amazon Billing and Cost Management

Amazon Cost and Usage Report

The Amazon Cost and Usage Reports (Amazon CUR) contains the most comprehensive set of cost and usage data available in Amazon. You can use Amazon CUR to publish your Amazon Web Services billing reports to an Amazon Simple Storage Service (Amazon S3) bucket.

When you create an Amazon CUR for China Regions, you can only create buckets in cn-north-1 (Beijing) and cn-northwest-1 (Ningxia).

Service Endpoint

Amazon Cost and Usage Report preference API in China provides the following endpoints:

- https://cur.cn-northwest-1.amazonaws.com.cn
Getting Started with Amazon Web Services in China

For more information in to find the API reference and User Guide, see Amazon Billing and Cost Management

Tax Settings

For each Amazon Web Services in China account you create, you can enter your tax information on the Tax Settings page of the Amazon Billing and Cost Management console. In addition to providing your name, business information, and address for tax purposes, you also specify the type of VAT invoice you want to receive from Amazon Web Services in China.

To enter your tax information:

1. Sign in to the Amazon Web Services Management Console, and choose your account name in the top navigation bar.
3. In the Amazon Billing and Cost Management console, choose Tax Settings and then follow the instructions on the page.

ICP Recordal

To use Amazon Web Services in China to host or distribute content publicly, you must complete the Internet Content Provider (ICP) recordal process. You can start the ICP recordal process through the Amazon Billing and Cost Management console. You will be redirected to a third-party site that handles the process.

To file for ICP recordal:

1. Sign in to the Amazon Web Services Management Console and choose your account name in the top navigation bar.
3. In the Amazon Billing and Cost Management console, choose the ICP recordal link, and follow the instructions on the page.

Amazon Price List API

The Amazon Price List Bulk API enables you to query for the prices of Amazon Web Services by using either JSON or CSV. Amazon prices change periodically, such as when new services or
features are launched or Amazon changes prices. You can receive Amazon Simple Notification Service notifications by using the following topic ARN:

arn:aws:sns:us-east-1:278350005181:price-list-api-china

**Service Endpoint**

You can use the following endpoint:

- https://pricing.cn-northwest-1.amazonaws.com.cn

You can also get pricing information from the following URL:

- https://pricing.cn-northwest-1.amazonaws.com.cn/offers/v1.0/cn/index.json

The Amazon Price List Query API provides a centralized and convenient way to programmatically query Amazon for services, products, and pricing information.

**Service Endpoint**

You can use the following endpoint:

- https://api.pricing.cn-northwest-1.amazonaws.com.cn

When you call the [ListPriceLists](https://pricing.cn-northwest-1.amazonaws.com.cn/offers/v1.0/cn/index.json) API operation, the CurrencyCode must be CNY.

**Using the Console**

The Amazon Web Services Management Console provides a simple web interface for Amazon Web Services. The Amazon Web Services Management Console is available in both Chinese and English and can be accessed at [https://console.amazonaws.cn](https://console.amazonaws.cn). The Amazon Web Services Management Console is dedicated to the Beijing and Ningxia Regions and doesn't support other Amazon Regions.

For console access, use your IAM user name and password to sign in to the [Amazon Web Services Management Console](https://console.amazonaws.cn) using the IAM sign-in page. IAM lets you securely control access to Amazon services and resources in your Amazon Web Services account.
Documentation by Service

The following topics describe the services available in the Beijing and Ningxia Regions. Each topic includes an overview of the service and links to additional documentation for the service. If there are differences between the expected functionality of a service and its functionality in the China Regions, these differences are documented. For services supported in the China Regions, see the Region Table.

Note

Amazon Web Services in China use a region-specific console. The Amazon documentation might show screenshots of the console for other Regions; changes in service functionality are documented in the topics for each service.

Amazon Athena

Amazon Athena is an interactive query service that makes it easy to analyze data in Amazon S3 using standard SQL. Athena is serverless, so there is no infrastructure to setup or manage, and you pay only for the queries you run. To get started, simply point to your data in S3, define the schema, and start querying using standard SQL.

Region Availability

Amazon Athena is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Athena is unique in the following ways:

No Differences.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

- Amazon Athena User Guide
- Amazon Athena API Reference

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
Getting Started with Amazon Web Services in China

• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
• For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.
Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon API Gateway

Amazon API Gateway is a fully managed service that makes it easy for developers to create, publish, maintain, monitor, and secure APIs at any scale. With a few clicks in the Amazon Web Services Management Console, you can create an API that acts as a "front door" for applications to access data, business logic, or functionality from your back-end services, such as workloads running on Amazon Elastic Compute Cloud (Amazon EC2), code running on Amazon Lambda, or any web application.

Amazon API Gateway handles all the tasks involved in accepting and processing up to hundreds of thousands of concurrent API calls, including traffic management, authorization and access control, monitoring, and API version management. Amazon API Gateway has no minimum fees or startup costs. You pay only for the API calls you receive and the amount of data transferred out.

Topics

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Amazon API Gateway is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon API Gateway is unique in the following ways:
To call API Gateway APIs in the Beijing and Ningxia Regions, you must use Beijing Region-specific or Ningxia Region-specific endpoints.

Edge-optimized APIs and edge-optimized custom domain names are not supported.

Filing for Internet Content Provider (ICP) recordal—If you want to service API requests in the Beijing Region that can be accessed without authentication, you must obtain an ICP license. For information about filing for ICP recordal, see Billing and Payment. You may also need to refile for ICP whitelisting for API Gateway in the Ningxia Region even if you already filed for it in the Beijing Region.

The following API Gateway features are either unavailable in the Beijing and Ningxia Regions or require an ICP license:

- API Gateway serves unauthenticated API requests only if the API owner's Amazon Web Services account is associated with a valid ICP license. As a result, creating an API using a Lambda authorizer or no authorizer requires an ICP license.
- You can configure an API using a custom authorizer or no authorizer, but the API can only be accessed if your Amazon Web Services in China account is associated with an ICP license.
- Amazon Cognito authorizers are not supported.
- Java and Ruby SDK generation is not supported.
- HTTP API private integrations with Amazon Cloud Map are not supported.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

**General Information About Amazon Web Services in China**

The following information applies to all Amazon Web Services that are available in the China Regions.
Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
• The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon App Mesh

Amazon App Mesh makes it easy to monitor and control microservices running on Amazon Web Services.

Amazon Aurora

Amazon Aurora is a MySQL- and PostgreSQL-compatible relational database built for the cloud, that combines the performance and availability of traditional enterprise databases with the simplicity and cost-effectiveness of open source databases.

Topics

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Amazon Aurora is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Aurora is unique in the following ways:

- Backtracking is not available.
- Aurora Serverless v1 isn't available in the Beijing Region.
- Because the Ningxia Region uses a unique certificate authority (CA), update your DB clusters for the Ningxia Region to use the Region-specific certificate identified by `rds-ca-rsa2048-g1` in `DescribeCertificates` calls as soon as possible. The remaining instructions described in the `Rotating your SSL/TLS certificate` topic are the same, except for the certificate identifier.

Guides and References

  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.
Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Application Auto Scaling

Application Auto Scaling is a web service for developers and system administrators who need a solution for automatically scaling their scalable resources for individual Amazon services beyond Amazon EC2.

For information about related services, see:

- the section called “Amazon Auto Scaling”
- the section called “Amazon EC2 Auto Scaling”

Topics

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Application Auto Scaling is available in the following regions in China:

- Beijing Region
- Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Application Auto Scaling is unique in the following ways:

- Only the following resources are supported for Application Auto Scaling in the China (Beijing) Region:
  - Amazon ECS services
  - Spot Fleet requests
  - Amazon EMR clusters
  - DynamoDB tables and global secondary indexes
  - Amazon SageMaker endpoint variants
  - Aurora replicas
  - Custom resources provided by your own applications or services
  - Lambda function provisioned concurrency
  - Amazon Keyspaces (for Apache Cassandra) tables
  - Amazon MSK cluster storage
  - Amazon Neptune clusters

- Only the following resources are supported for Application Auto Scaling in the China (Ningxia) Region:
  - Amazon ECS services
  - Spot Fleet requests
  - Amazon EMR clusters
  - DynamoDB tables and global secondary indexes
  - Amazon SageMaker endpoint variants
  - Aurora replicas
  - Lambda function provisioned concurrency
  - Amazon Keyspaces (for Apache Cassandra) tables
  - Amazon MSK cluster storage
  - Amazon Neptune clusters

- Because Amazon Health Dashboard is unavailable in the China Regions, Application Auto Scaling does not support Amazon Health Dashboard features.
Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions
• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon EC2 Auto Scaling

Amazon EC2 Auto Scaling allows you to scale your Amazon EC2 capacity up or down automatically according to conditions you define. With Amazon EC2 Auto Scaling, you can ensure that the number of Amazon EC2 instances you're using increases seamlessly to maintain performance during demand spikes, and decreases automatically to minimize costs during demand lulls. Amazon EC2 Auto Scaling is particularly well suited for applications that experience hourly, daily, or weekly
variability in usage. Amazon EC2 Auto Scaling is enabled by Amazon CloudWatch and available at no additional charge beyond CloudWatch fees.

For information about related services, see:

- Amazon Auto Scaling
- Application Auto Scaling

  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Billing and Cost Management

Amazon Billing and Cost Management is a web service that provides features that helps you monitor your costs and pay your bill. Amazon Web Services in China bills your account for usage, which ensures that you pay only for what you use.

Topics

• Region Availability
Region Availability

Amazon Billing and Cost Management is available in the following regions in China:

- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Billing and Cost Management is unique in the following ways:

- For detailed information on Amazon Billing and Cost Management for Amazon Web Services in China, see Billing and Payment

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.
Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Certificate Manager

Amazon Certificate Manager (ACM) makes it easy to provision, manage, and deploy SSL/TLS certificates on Amazon managed resources.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon CloudFormation

Amazon CloudFormation enables you to create and provision Amazon Web Services in China infrastructure deployments predictably and repeatedly. It helps you leverage Amazon Web Services in China products such as Amazon Elastic Compute Cloud, Amazon Elastic Block Store, Amazon Simple Notification Service, Elastic Load Balancing, and Amazon EC2 Auto Scaling to build highly reliable, highly scalable, cost-effective applications without worrying about creating and configuring the underlying Amazon Web Services in China infrastructure. Amazon CloudFormation enables you to use a template file to create and delete a collection of resources together as a single unit (a stack).

Region Availability

Amazon CloudFormation is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon CloudFormation is unique in the following ways:

- Amazon Web Services in China supports a subset of Amazon services and a single Availability Zone and Region; you may need to modify Amazon CloudFormation sample templates and template snippets to conform to these differences.
- Amazon CloudFormation doesn't support the AWS::Include transform.
- Amazon CloudFormation doesn't support the following resources:
  - AWS::Cognito::IdentityPool
  - AWS::Cognito::IdentityPoolRoleAttachment
  - AWS::Cognito::UserPool
  - AWS::Cognito::UserPoolClient
  - AWS::Cognito::UserPoolGroup
  - AWS::Cognito::UserPoolUser
  - AWS::Cognito::UserPoolUserToGroupAttachment
  - AWS::DAX::Cluster
  - AWS::DAX::ParameterGroup
  - AWS::WAFRegional::XssMatchSetItem
  - AWS::DMS::Certificate
  - AWS::DMS::Endpoint
  - AWS::DMS::EventSubscription
  - AWS::DMS::ReplicationInstance
  - AWS::DMS::ReplicationSubnetGroup
  - AWS::DMS::ReplicationTask
• AWS::KinesisAnalytics::Application
• AWS::KinesisAnalytics::ApplicationOutput
• AWS::KinesisAnalytics::ApplicationReferenceDataSource
• AWS::Organizations::Policy
• AWS::Organizations::ResourcePolicy
• AWS::WAFRegional::ByteMatchSet

Getting Started with Amazon Web Services in China

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon CloudFront

Amazon CloudFront is a content delivery network (CDN) service that securely delivers data, videos, applications, and APIs to customers, with low latency and high transfer speeds, in a developer-friendly environment. When a user requests content that you're serving with CloudFront, the request is routed to the edge location that provides the lowest latency (time delay), so that content is delivered with the best possible performance.

CloudFront China uses a network of four edge locations in the following cities: Beijing, Shanghai, Zhongwei, and Shenzhen.

Topics

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Amazon CloudFront is available in the following regions in China:

- Beijing Region
- Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon CloudFront is unique in the following ways:

- You can’t use the default CloudFront domain, *.cloudfront.cn, to serve content. You must add an alternate domain name, also known as a CNAME, to your CloudFront distributions, and then use that domain name in the URLs for your content. You also must have an ICP registration. In addition, just as with the global CloudFront service, to serve content over HTTPS, you must use an SSL/TLS certificate with your alternate domain name.

Amazon CloudFront in the China Regions currently does not support Amazon Certificate Manager. You must get an SSL/TLS certificate from a different third-party certificate authority (CA) and then upload it to the IAM certificate store. For more information, see Importing an SSL/TLS Certificate in the Amazon CloudFront Developer Guide.

- By using the CloudFront API, you can view the ICP recordal status for each CNAME in a CloudFront distribution: APPROVED, SUSPENDED, or PENDING. The ICP recordal status is also displayed in the console for Amazon Web Services in China customers. For more information, see CNAME Status (General Tab) in the Amazon CloudFront Developer Guide and AliasICPRecordal in the Amazon CloudFront API Reference.

- Dedicated IP addresses are not available for custom SSL certificates.
- IPv6 is not supported.
- Regional edge caches (RECs) are not available.
- Lambda@Edge is not available. Some rules can be implemented on Application Load Balancer or API Gateway origin.
- Amazon WAF, a web application firewall service, is not available for CloudFront. Amazon WAF can be used on the origin (Application Load Balancer or API Gateway). For rules that should act on the user IP, such as rate limits, configure it to get the IP from the X-Forwarded-For header sent by CloudFront.

- If you need to restore ACL permissions for the awslogsdelivery account so that CloudFront can write access logs to your Amazon S3 bucket, you must provide the following canonical name for the account: a52cb28745c0c06e84ec548334e44bfa7fc2a85c54af20cd59e4969344b7af56
- When you use an Amazon S3 bucket as a CloudFront origin, use the following configuration:
  - If the S3 bucket is located inside the China Regions, use one of the following formats.
• If your S3 bucket is not a website endpoint, use the following format:  
  bucket-name.s3.
  region.amazonaws.com.cn.

• If your S3 bucket is a website endpoint, use the following format:  
  bucket-name.s3-
  website.region.amazonaws.com.cn.

• When you specify Amazon S3 origins, region can be one of the following:
  
  For the Beijing Region: cn-north-1.
  For the Ningxia Region: cn-northwest-1.

• If the S3 bucket is located outside of the China Regions, use the following format  
  when you add the bucket as a CloudFront origin:  
  bucket-name.s3-website.
  region.amazonaws.com.cn. For more information and guidance, follow the  
  recommendations in Using Amazon S3 Buckets Configured as Website Endpoints for Your  
  Origin.

• For Amazon Web Services in China customers, CloudFront does not have root keys and does not  
  support root access.

• Cache policies and origin request policies are not available. Legacy cache settings can be used  
  instead.

• Origin Shield is not available.

• CloudFront Functions are not available.

• Legacy clients that don't support server name indication (SNI) are not supported.

• Associate-alias and List-conflicting-aliases API are not available.

• Real-time logs are not available. Standard logs can be used.

• Brotli compression is not available. Gzip compression can be used.

• Origin access control (OAC) is not available. Origin Access Identity (OAI) can be used.

• MediaStore is not available.

• HTTP/3 is not available.

• Websocket is not supported.

• CloudFront managed prefix list is not available. CloudFront IP addresses can be allowlisted in  
  Security Groups associated with resources inside Amazon VPC. For more details about China  
  CloudFront ip addresses, contact Amazon Web Services Support.

Amazon Web Services Console
Getting Started with Amazon Web Services in China

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon CloudTrail**

With Amazon CloudTrail, you can monitor your Amazon deployments in the cloud by getting a history of Amazon API calls for your account, including API calls made via the Amazon Web Services Management Console, the Amazon SDKs, the command line tools, and higher-level Amazon services. You can also identify which users and accounts called Amazon APIs for services that support CloudTrail, the source IP address the calls were made from, and when the calls occurred. You can integrate CloudTrail into applications using the API, automate trail creation for your organization, check the status of your trails, and control how administrators turn CloudTrail logging on and off.

**Topics**

- [Feature Availability and Implementation Differences](#)
- [Guides and References](#)
- [General Information About Amazon Web Services in China](#)

**Region Availability**

Amazon CloudTrail is available in the following regions in China:

- Beijing Region
- Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon CloudTrail is unique in the following ways:

- As of November 22, 2021, Amazon CloudTrail changed how trails capture Amazon CloudFront events. Now, Amazon CloudFront events are available only in the Region where the event was processed, the China (Ningxia) Region, cn-northwest-1. For trails monitoring global service events, be sure to convert single-Region trails in China (Beijing) Region, cn-north-1, to multi-Region trails, to include events from China (Ningxia) Region, cn-northwest-1. For more information, see [Converting a trail that applies to one Region to apply to all Regions](#).

In contrast, the **Event history** in the CloudTrail console and the **aws cloudtrail lookup-events** command will show Amazon CloudFront events in the Region where they occurred.

- CloudTrail Lake is not currently available in China regions.

- The option to add an Amazon Organizations delegated administrator using the console in the Amazon China Regions is not available. To add a delegated administrator, use the **aws cloudtrail register-organization-delegated-admin** command.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon CloudWatch

Amazon CloudWatch monitors your Amazon Web Services in China resources and the applications you run on Amazon Web Services in China in real time. You can use CloudWatch to collect and track metrics, which are the variables you want to measure for your resources and applications. CloudWatch alarms send notifications or automatically make changes to the resources you are monitoring based on rules that you define.

Amazon CloudWatch Events delivers a near real-time stream of system events that describe changes in Amazon Web Services (Amazon) resources. Using simple rules that you can quickly set up, you can match events and route them to one or more target functions or streams.

You can use Amazon CloudWatch Logs to monitor, store, and access your log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, Amazon CloudTrail, and other sources.

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.
Amazon Identity and Access Management (IAM)

- You can grant or deny a service access to resources using the Principal policy element.
- Service principal values vary by Region.

EC2-Classic Platform

- The EC2-Classic platform is not supported.

Free Usage Tier

- The free usage tier is supported in the Ningxia Region.
- The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon CodeBuild

Amazon CodeBuild is a fully managed build service that compiles source code, runs tests, and produces software packages that are ready to deploy. With Amazon CodeBuild, you don't need to provision, manage, and scale your own build servers. Amazon CodeBuild scales continuously and processes multiple builds concurrently, so your builds are not left waiting in a queue. You can get started quickly by using prepackaged build environments, or you can create custom build environments that use your own build tools. With Amazon CodeBuild, you are charged by the minute for the compute resources you use.

Region Availability

CodePipeline is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of CodePipeline is unique in the following ways.
• CodePipeline cross-region actions are only available between the China (Beijing) and China (Ningxia) Regions.

• You cannot create notification rules for CodePipeline in the China (Beijing) and China (Ningxia) Regions. AWS CodeStar Notifications is not available in the China (Beijing) and China (Ningxia) Regions.

• The following actions/provider types are not supported:
  • CodeStarSourceConnection source action for Bitbucket, GitHub, and GitHub Enterprise Server connections
  • Amazon CloudFormation StackSets deploy action
  • Amazon Device Farm test action
  • Amazon Step Functions invoke action
  • GitHub version 1 source action
  • Jenkins build action
  • Snyk invoke action

**Amazon Cognito**

Amazon Cognito lets you easily add user sign-up and sign-in and manage permissions for your mobile and web apps. You can create your own user directory within Amazon Cognito. You can also choose to authenticate users through social identity providers such as Facebook, Twitter, or Amazon; with SAML identity solutions; or by using your own identity system. In addition, Amazon Cognito enables you to save data locally on users' devices, allowing your applications to work even when the devices are offline. You can then synchronize data across users' devices so that their app experience remains consistent regardless of the device they use.

Amazon Config

Amazon Config provides a detailed view of the configuration of Amazon resources in your Amazon Web Services account. This includes how the resources are related to one another and how they were configured in the past so that you can see how the configurations and relationships change over time.
An Amazon resource is an entity that you can work with in Amazon, such as an Amazon Elastic Compute Cloud (Amazon EC2) instance, Amazon Identity and Access Management (IAM) user, or an Amazon Simple Storage Service Amazon S3) bucket.

With Amazon Config, you can do the following:

- Evaluate your Amazon resource configurations for desired settings.
- Get a snapshot of the current configurations of the supported resources that are associated with your Amazon Web Services account.
- Retrieve configurations of one or more resources that exist in your account.
- Retrieve historical configurations of one or more resources.
- Receive a notification whenever a resource is created, modified, or deleted.
- View relationships between resources. For example, you might want to find all resources that use a particular security group.

- The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Deep Learning Containers

Amazon Deep Learning Containers (Deep Learning Containers) are a set of Docker images for training and serving models in TensorFlow, TensorFlow 2, PyTorch, and MXNet. Deep Learning Containers provide optimized environments with TensorFlow and MXNet, Nvidia CUDA (for GPU instances), and Intel MKL (for CPU instances) libraries and are available in the Amazon Elastic Container Registry (Amazon ECR).

Region Availability

Amazon Deep Learning Containers is available in the following regions in China:
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Deep Learning Containers is unique in the following ways:

- Elastic Inference Deep Learning Container images are not available in the Beijing and Ningxia Regions.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

- Developer Guide

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.
Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples
The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Direct Connect

Amazon Direct Connect links your internal network to an Amazon Direct Connect location over a standard 1 gigabit, 10 gigabit, or 100 gigabit Ethernet fiber-optic cable. One end of the cable is connected to your router, the other to an Amazon Direct Connect router. With this connection in place, you can create virtual interfaces directly to the Amazon Web Services Cloud and Amazon Virtual Private Cloud, bypassing Internet service providers in your network path.

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions
• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Deep Learning AMI

The Amazon Deep Learning AMI (DLAMI) is your one-stop shop for deep learning in the Cloud. This customized machine instance is available in most Amazon Elastic Compute Cloud regions for a variety of instance types, from a small CPU-only instance to the latest high-powered multi-GPU instances. It comes preconfigured with NVIDIA CUDA and NVIDIA cuDNN and the latest releases of the most popular deep learning frameworks.
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Deep Learning AMI is unique in the following ways:

• The Amazon Web Services Marketplace is not available in China Regions.
• You must launch Deep Learning AMIs through the EC2 QuickStart tab. Because the Amazon Web Services Marketplace is not available, all eight DLAMIs are available on the QuickStart tab. In other Amazon Regions, only four of the eight DLAMIs are available there.
• Windows AMIs are not available.
• The instance selection guide recommends using the latest generation of EC2 instance types (C5 and P3), but these are not available in the China Regions. We recommend using the previous generation or instance types: C4 or P2.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF.   - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.
Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Directory Service

Amazon Directory Service provides multiple ways to use Microsoft Active Directory (AD) with other Amazon services. Directories store information about users, groups, and devices, and administrators use them to manage access to information and resources. Amazon Directory Service provides multiple directory choices for customers who want to use existing Microsoft AD or Lightweight Directory Access Protocol (LDAP)–aware applications in the cloud. It also offers those same choices to developers who need a directory to manage users, groups, devices, and access.

Region Availability

Amazon Directory Service is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Directory Service is unique in the following ways:
• Only the Amazon Managed Microsoft AD directory type and the AD Connector directory type are supported by Amazon Directory Service in the Beijing and Ningxia Regions.

• The following directory types are not currently supported in the Beijing and Ningxia Regions:
  • Simple AD
  • Amazon Cloud Directory

• The following Amazon Managed Microsoft AD features are not currently supported in both the Beijing and Ningxia Regions:
  • Mapping users to IAM roles for access to the Amazon Web Services Management Console

• The following Amazon Managed Microsoft AD features are not currently supported in the Beijing Region:
  • Multi-factor authentication (MFA)

• The following Amazon services are not currently supported by Amazon Directory Service in both the Beijing and Ningxia Regions:
  • Amazon WorkDocs
  • Amazon WorkMail
  • Amazon QuickSight
  • Amazon Chime
  • Amazon Connect
  • Amazon Web Services Management Console

• The following Amazon services are not currently supported by Amazon Directory Service in the Beijing Region:
  • WorkSpaces

• Amazon Resource Names (ARNs) and endpoints have different values in the Beijing and Ningxia Regions.

• Only signature version 4 signing is supported in the Beijing and Ningxia Regions.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. **Amazon DynamoDB**

Amazon DynamoDB is a fully managed NoSQL database service that provides fast and predictable performance with seamless scalability. If you are a developer, you can use Amazon DynamoDB to create a database table that can store and retrieve any amount of data, and serve any level of request traffic. Amazon DynamoDB automatically spreads the data and traffic for the table over a sufficient number of servers to handle the request capacity specified by the customer and the amount of data stored, while maintaining consistent and fast performance. All data items are stored on solid-state disks (SSDs).

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon EBS direct APIs

You can use the Amazon Elastic Block Store (Amazon EBS) direct APIs to create Amazon EBS snapshots, write data directly to your snapshots, read data on your snapshots, and identify the
differences or changes between two snapshots. If you're an independent software vendor (ISV) who offers backup services for Amazon EBS, the EBS direct APIs make it more efficient and cost-effective to track incremental changes on your Amazon EBS volumes through snapshots. This can be done without having to create new volumes from snapshots, and then use Amazon Elastic Compute Cloud (Amazon EC2) instances to compare the differences.

Region Availability

Amazon Elastic Kubernetes Service is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon EKS is unique in the following ways:

- App Mesh isn't available.
- Amazon EKS on Amazon Outposts isn't available.
- Amazon EC2 A1 instance worker nodes aren't available.
- The Amazon EKS Connector isn't available.
- The following add-ons may require modification for use (see the topics for details)
  - Kubernetes Cluster Autoscaler
  - Kubernetes Dashboard
  - Kubernetes Horizontal Pod Autoscaler
• **Kubernetes Metrics Server**
• **Kubernetes Vertical Pod Autoscaler**
• **Project Calico**

- The [Amazon EFS CSI driver](https://docs.aws.amazon.com/efs/latest/ug/index.html) is only available as a self-managed installation.
- The Mountpoint for Amazon S3 CSI Driver isn't available as an Amazon EKS add-on and self-managed installation isn't officially supported.
- Amazon Managed Service for Prometheus isn't available.
- Amazon EKS Extended support for Kubernetes Versions isn't available.
- Amazon EKS Anywhere isn't available.
- Amazon EKS Upgrade insights aren't available.

## Guides and References

Availability Zones for the China Regions

• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.

• EC2-Classic Platform
  • The EC2-Classic platform is not supported.

• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.
Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon ElastiCache

Amazon ElastiCache is a web service that makes it easy to set up, manage, and scale distributed in-memory cache environments in the cloud. It provides a high performance, resizable, and cost-effective in-memory cache, while removing the complexity associated with deploying and managing a distributed cache environment. You can choose from Memcached or Redis protocol-compliant cache engine software, and let ElastiCache perform software upgrades and patch management for you automatically.

Amazon ElastiCache is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of ElastiCache is unique in the following way:

- When granting ElastiCache read access to your .rdb file on Amazon S3 in the Beijing and Ningxia Regions, type the canonical ID `b14d6a125bdf69854ed8ef2e71d8a20b7c490f252229b806e514966e490b8d83` in the Grantee field instead of `aws-scs-s3-readonly@amazon.com`. 
• The r6gd node type and data-tiering are not available in these Regions.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

• Amazon ElastiCache User Guide
• Amazon ElastiCache API Reference

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

• Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
• For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.
Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Elastic Beanstalk

With Amazon Elastic Beanstalk, you can quickly deploy and manage applications in the Amazon Web Services Cloud without worrying about the infrastructure that runs those applications. Elastic Beanstalk reduces management complexity without restricting choice or control. You simply
upload your application, and Elastic Beanstalk automatically handles the details of capacity provisioning, load balancing, scaling, and application health monitoring.

• General Information About Amazon Web Services in China

Region Availability

Amazon Elastic Beanstalk is available in the following regions in China:

• Beijing Region
• Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Elastic Beanstalk is unique in the following ways:

• In the Beijing Region, environment domains generated by Elastic Beanstalk are formatted as follows, where * denotes the custom domain: *.cn-north-1.eb.amazonaws.com.cn. For more information, see Using Custom Domains with Elastic Beanstalk in the Amazon Elastic Beanstalk Developer Guide.

• In the China (Ningxia) Region, environment domains generated by Elastic Beanstalk are formatted as follows, where * denotes the custom domain: *.cn-northwest-1.eb.amazonaws.com.cn.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links

**General Information About Amazon Web Services in China**

The following information applies to all Amazon Web Services that are available in the China Regions.

**Amazon Web Services Accounts in the China Regions**

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see [Signup, Accounts, and Credentials](#).

**Domain for Amazon Web Services in China**

The domain for Amazon Web Services in China is **www.amazonaws.cn**.

**Endpoints & Amazon Resource Names (ARNs)**

For information about endpoints and ARNs in Amazon Web Services in China, see [Endpoints and ARNs for Amazon Web Services in China](#).

**Availability Zones for the China Regions**

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

**General Information for Amazon Web Services in China**
The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- **Amazon Identity and Access Management (IAM)**
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.

- **EC2-Classic Platform**
  - The EC2-Classic platform is not supported.

- **Free Usage Tier**
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

**Amazon Web Services Console**

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon Elastic Compute Cloud**

Amazon Elastic Compute Cloud (Amazon EC2) is a web service that provides resizable compute capacity in the cloud. It's designed to make web-scale computing easier for developers. Amazon EC2 presents a true virtual computing environment, allowing you to use web service interfaces to launch instances with a variety of operating systems, load them with your custom application environment, manage your network's access permissions, and run your image using as many or few systems as you want to.

**Topics**

- [Region Availability](#)
- [Feature Availability and Implementation Differences](#)
Region Availability

Amazon Elastic Compute Cloud is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon EC2 is unique in the following ways:

- **Starter accounts**—For customers with an Internal Access Account, Amazon EC2 public Internet ports are blocked. Internal ports remain available. For more information, see Signup, Accounts, and Credentials.
- **Limited instance types**—Only some Amazon EC2 instance types are available. For a complete list of the available instance types, see Amazon EC2 instance types.
- **No Amazon Systems Manager for Microsoft System Center Virtual Machine Manager**—SCVMM is not available.
- **EC2 AMI Tools**—The Beijing and Ningxia Regions use a non-default public key certificate to encrypt Amazon Machine Image (AMI) manifests. The `ec2-bundle-image`, `ec2-bundle-vol`, `ec2-migrate-bundle`, and `ec2-migrate-manifest` commands require the `--ec2cert $EC2_AMI_TOOL_HOME/etc/ec2/amitools/cert-ec2-cn-north-1.pem` option in the Beijing Region, and the `--ec2cert $EC2_AMI_TOOL_HOME/etc/ec2/amitools/cert-ec2-cn-northwest-1.pem` option in the Ningxia Region.
- **Cross-region copy operations** are supported only between the Beijing and Ningxia Regions.
- **VM Export**—The Amazon S3 bucket for the destination image must exist and must have WRITE and READ_ACP permissions granted to the Beijing Region account with the following canonical ID: 834bafdf86b15b6ca71074df0fd1f93d234b9d5e848a2cb31f880c149003ce36f.
- **VM Import**—Windows 11 is not supported.
- **VM Import**—Windows Server 2022 is not supported.
- By default, **enhanced networking** is not enabled on Windows Server 2012 R2 AMIs. For more information, see Enabling Enhanced Networking on Windows Instances in a VPC.
Getting Started with Amazon Web Services in China

- IPv6 is supported. For more information about IPv6 support for Amazon S3 and other services, see Getting Started with Amazon Web Services in China.

- **Systems Manager Automation** — The `aws:copyImage` action is not supported.

- **Spot Instance requests**—The `AWSServiceRoleForEC2Spot` service-linked role is not created for you automatically. Create a service-linked role with this name, using `spot.amazonaws.com` as the service name and `AWSEC2SpotServiceRolePolicy` as the policy.

- **Reserved Instances:**
  - **No Reserved Instance Marketplace**—The Reserved Instance Marketplace is not available.
  - **No three-year-term Standard Reserved Instances**—Standard Reserved Instances are not available in three-year terms.
  - **Reserved Instance Discount Pricing Tiers**—For more information, see Understanding Reserved Instance Discount Pricing Tiers.

### Pricing Tiers

<table>
<thead>
<tr>
<th>Total List Value of Reserved Instances</th>
<th>Upfront discount</th>

  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

EC2 Image Builder

EC2 Image Builder is a fully-managed Amazon service that makes it easier to automate the creation, management, and deployment of customized, secure, and up-to-date “golden” server images that are pre-installed and pre-configured with software and settings to meet specific IT standards.

Topics
- Region Availability
- Feature Availability and Implementation Differences
Region Availability

EC2 Image Builder is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Image Builder is unique in the following ways:

- Amazon EC2 Image Builder does not support common vulnerability (CVE) findings in Beijing and Ningxia Regions.
- Amazon EC2 Image Builder does not support image lifecycle policies in Beijing and Ningxia Regions.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. • The free usage tier is supported in the Ningxia Region.
• The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Elastic Container Registry

Amazon Elastic Container Registry (Amazon ECR) is a managed Amazon Docker registry service that is secure, scalable, and reliable. Amazon ECR supports private Docker repositories with resource-based permissions using Amazon Identity and Access Management (IAM) so that specific users or Amazon EC2 instances can access repositories and images. Developers can use the Docker CLI to push, pull, and manage images.

Region Availability

Amazon Elastic Container Registry is available in the following regions in China:
• Beijing Region
• Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Elastic Container Registry is unique in the following ways:

- Cross-region and cross-account replication is now supported between the China Regions. However, cross-region and cross-account replication is not supported between China Regions and Amazon Web Services Regions outside of China.
- The Amazon ECR VPC endpoints are `cn.com.amazonaws.cn-northwest-1.ecr.dkr` and `cn.com.amazonaws.cn-northwest-1.ecr.api`. For more information, see Amazon ECR interface VPC endpoint (Amazon PrivateLink).

**Amazon Elastic Container Service**

Amazon Elastic Container Service (Amazon ECS) is a highly scalable, fast, container management service that makes it easy to run, stop, and manage Docker containers on a cluster of Amazon EC2 instances. Amazon ECS lets you launch and stop container-based applications with simple API calls, allows you to get the state of your cluster from a centralized service, and gives you access to many familiar Amazon EC2 features.

**Topics**

**Region Availability**

Amazon Elastic Container Service is available in the following regions in China:

- Beijing Region
- Ningxia Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of Amazon ECS is unique in the following ways:

- When you use an external instance (ECS Anywhere) that runs Windows, run the following command on your on-premises server or virtual machine (VM) to download the installation script.

  ```bash
  ```
For more information about registering external instances, see Registering an external instance to a cluster in the Amazon Elastic Container Service Developer Guide.

- The following features are not available in the China (Ningxia) Region:
  - CodePipeline support
- The following features are not available in the China (Ningxia) Region and China (Beijing) Region:
  - Using CloudWatch alarms to detect when a rolling update deployment has failed

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Elastic Load Balancing

Elastic Load Balancing automatically distributes incoming application traffic across multiple Amazon EC2 instances. It enables you to achieve greater fault tolerance in your applications, seamlessly providing the amount of load balancing capacity needed in response to incoming application traffic. Elastic Load Balancing detects unhealthy instances within a pool and automatically reroutes traffic to healthy instances until the unhealthy instances have been restored.

**AWS Elemental MediaConvert**

AWS Elemental MediaConvert is a file-based video processing service that provides scalable video processing for content owners and distributors with media libraries of any size. MediaConvert offers advanced features that enable premium content experiences, including:

- Professional broadcast codecs that support increased bit depth and HDR content creation
- Still graphic overlays
- Advanced audio
- Closed captioning support
AWS Elemental MediaConvert offers support for various input formats and adaptive bitrate (ABR) packaging output formats for delivering high-quality content from a range of sources onto primary and multiscreen devices.

**Topics**
- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

**Region Availability**

AWS Elemental MediaConvert is available in the following regions in China:

- Ningxia Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of AWS Elemental MediaConvert is unique in the following ways:

- AWS Elemental MediaConvert is available only in the Ningxia Region.
- Some forms of data protection through encryption are not currently supported by AWS Elemental MediaConvert in the Ningxia Region. The following forms of encryption are not supported:
  - Decryption of input media files that you encrypt before uploading them to Amazon S3.
  - Encryption of output media files with a master key that is managed by Amazon Key Management Service (SSE-KMS). Therefore, you can't provide your own master key when using AWS Elemental MediaConvert in the Ningxia Region.

**Note**

In the Ningxia Region, AWS Elemental MediaConvert does support encryption of output files with a master key managed by Amazon S3.

- Digital rights management (DRM) using dynamic keys. This includes all DRM done with third-party DRM partners using the SPEKE specification.
Getting Started with Amazon Web Services in China

Note
In the Ningxia Region, AWS Elemental MediaConvert does support static key encryption in HLS packages.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.
Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon EMR

Amazon EMR helps you analyze and process vast amounts of data by distributing the computational work across a cluster of virtual servers running in the Amazon Cloud. The cluster is managed using an open-source framework called Hadoop. Amazon EMR lets you focus on crunching or analyzing your data without having to worry about time-consuming setup, management, and tuning of Hadoop clusters or the compute capacity they rely on.

Region Availability

Amazon EMR is available in the following regions in China:

• Beijing Region
• Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon EMR is unique in the following ways:

• Automatic Amazon Linux updates, as discussed in the Amazon EMR Management Guide, are not enabled in the Beijing and Ningxia Regions.

• Amazon EMR does not support AMI version 2.4.11 and earlier in the Beijing and Ningxia regions. The China (Ningxia) region only supports Amazon EMR version 4.9.1 and later.

• YARN Application history is not available on the cluster details page.

• The old Amazon EMR management console is the default console for the Beijing and Ningxia Regions.

• The following table indicates which instance are available to be used with Amazon EMR in the Beijing and Ningxia regions. Yes appears for regions where the instance type is available.

- Amazon EMR versions earlier than 4.0
  - [Amazon EMR Developer Guide](#) (applies only to Amazon EMR versions earlier than 4.0)

### General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

**Amazon Web Services Accounts in the China Regions**
To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see [Signup, Accounts, and Credentials](#).

**Domain for Amazon Web Services in China**

The domain for Amazon Web Services in China is [www.amazonaws.cn](http://www.amazonaws.cn).

**Endpoints & Amazon Resource Names (ARNs)**

For information about endpoints and ARNs in Amazon Web Services in China, see [Endpoints and ARNs for Amazon Web Services in China](#).

**Availability Zones for the China Regions**

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

**General Information for Amazon Web Services in China**

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.
Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon EventBridge

Amazon EventBridge is a serverless event bus service that makes it easy to connect your applications with data from a variety of sources. EventBridge delivers a stream of real-time data from your own applications, software-as-a-service (SaaS) applications, and Amazon services and routes that data to targets such as Amazon Lambda. You can set up routing rules to determine where to send your data to build application architectures that react in real time to all of your data sources. EventBridge enables you to build event-driven architectures that are loosely coupled and distributed.

Amazon GameLift

Amazon GameLift is a fully managed service for deploying, operating, and scaling your session-based multiplayer game servers in the cloud. Amazon GameLift replaces the work required to host your own game servers, including buying and setting up hardware, and managing ongoing activity, security, storage, and performance tracking. The Amazon GameLift auto-scaling capabilities provide additional protection from having to pay for more resources than you need, while helping to ensure that your players can find and join games with minimal waiting. Amazon GameLift provides robust tool for matchmaking with FlexMatch.

• General Information About Amazon Web Services in China

Region Availability

Amazon GameLift is available in the following regions in China:

• Beijing Region
• Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon GameLift is unique in the following ways:

• Amazon Graviton instance types are not available in Amazon GameLift.
• Fleets that are created and reside in a China region cannot deploy instances to locations other than the fleet's home region. In addition, fleets that reside outside of a China region cannot deploy instances to remote locations in a China region.
• For any queues that are created and run in a China region, they must contain only destinations (either fleets or aliases) that are also in the China region; destinations outside of the China region cannot be used. In addition, destinations that run in a China region cannot be used by a queue that is outside of the China region.

• For FlexMatch matchmaking, matchmaking configurations that are created and run in a China region must use only queues that are also in the China region; queues in other regions cannot be used. In addition, queues that run in a China region cannot be used by a matchmaking configuration that is not in a China region.

• When securely accessing Amazon services from Amazon GameLift-hosted instances, instances in fleets that are deployed in a China region can only access other Amazon resources in the region; they cannot access Amazon resources in other regions. In addition, other Amazon resources that are deployed in a China region cannot be accessed by instances in fleets that are deployed in a different region.

• Because Amazon Certificate Manager is not available in the China Regions, TLS certificate generation is not supported. New fleets must have the certificate configuration set to disabled.

• Use of AMD instances for Amazon GameLift FleetIQ game server groups is not available in the China Regions.

• Game server builds for the Amazon Linux 2023 operating system are not supported.

• The use of personal compute resources with Amazon GameLift Anywhere is not supported.

• Server SDK 5.x is not supported; this includes the use of C++, C#, and Go.

• Server side encryption for Amazon SNS topics is not supported.

Guides and References

Amazon Glue

Amazon Glue is a fully managed ETL (extract, transform, and load) service that makes it simple and cost-effective to categorize your data, clean it, enrich it, and move it reliably between various data stores. Amazon Glue consists of a central data repository known as the Amazon Glue Data Catalog, an ETL engine that automatically generates Python code, and a flexible scheduler that handles dependency resolution, job monitoring, and retries. Amazon Glue is serverless, so there's no infrastructure to set up or manage. Use the Amazon Glue console to discover your data, transform it, and make it available for search and querying. You can also use the Amazon Glue API operations to interface with Amazon Glue.

**Amazon S3 Glacier**

Amazon S3 Glacier is a low-cost storage service that provides secure and durable storage for data archiving and backup. With S3 Glacier, customers can store their data cost effectively for months, years, or even decades. Amazon S3 Glacier enables customers to offload the administrative burdens of operating and scaling storage to Amazon Web Services in China, so they don't have to worry about capacity planning, hardware provisioning, data replication, hardware failure detection and recovery, or time-consuming hardware migrations.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.
• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

**Amazon Web Services Console**

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon GuardDuty**

Amazon GuardDuty is a continuous security monitoring service. Amazon GuardDuty can help to identify unexpected and potentially unauthorized or malicious activity in your Amazon environment.

**Topics**

• [Region Availability](#)
• [Feature Availability and Implementation Differences](#)
• [Guides and References](#)
• [General Information About Amazon Web Services in China](#)

**Region Availability**

Amazon GuardDuty is available in the following regions in China:
Feature Availability and Implementation Differences

- As of June 11, 2024, GuardDuty Malware Protection for S3 is not supported in both the China Regions.
- As of January 25, 2024, malware scan (in Malware Protection) of Amazon EBS volumes encrypted with Amazon managed keys, is not supported in both the China Regions.
- As of November 27, 2023, Runtime Monitoring is not supported in both the China Regions. The new APIs related to Runtime Monitoring are also not supported in these Regions.
- As of November 8, 2023, the following Kubernetes audit logs finding types are not supported in both the China Regions:
  - PrivilegeEscalation:Kubernetes/AnomalousBehavior.RoleBindingCreated
  - Execution:Kubernetes/AnomalousBehavior.ExecInPod
  - PrivilegeEscalation:Kubernetes/AnomalousBehavior.WorkloadDeployed!PrivilegedContainer
  - PrivilegeEscalation:Kubernetes/AnomalousBehavior.WorkloadDeployed!ContainerWithSensitiveMount
  - Execution:Kubernetes/AnomalousBehavior.WorkloadDeployed
  - PrivilegeEscalation:Kubernetes/AnomalousBehavior.RoleCreated
  - Discovery:Kubernetes/AnomalousBehavior.PermissionChecked
- As of May 25, 2023, On-demand malware scan within GuardDuty Malware Protection for EC2 is not supported in both the China Regions. The new API related to on-demand malware scan is also not supported in these Regions.
- As of April 5, 2023, the following Amazon EC2 finding types are not supported in both the China Regions.
  - DefenseEvasion:EC2/UnusualDoHActivity
  - DefenseEvasion:EC2/UnusualDoTActivity
- As of March 30, 2023, EKS Runtime Monitoring is not supported in both the China Regions. The new APIs related to EKS Runtime Monitoring are also not supported in these Regions.
- As of November 30, 2022, the GuardDuty RDS Protection feature is not supported in China Regions.
• As of September 29, 2021, GuardDuty findings for CloudFront activity will no longer be available in China (Beijing) Region, cn-north-1. In order to monitor CloudFront activity, GuardDuty must be enabled in China (Ningxia) Region, cn-northwest-1.

• The following GuardDuty Tor-related finding types have retired in both Beijing and Ningxia regions:
  • UnauthorizedAccess:EC2/TorClient
  • UnauthorizedAccess:EC2/TorRelay
  • Discovery:S3/TorIPCaller
  • UnauthorizedAccess:S3/TorIPCaller
  • Recon:IAMUser/TorIPCaller
  • UnauthorizedAccess:IAMUser/TorIPCaller
  • CredentialAccess:Kubernetes/TorIPCaller
  • DefenseEvasion:Kubernetes/TorIPCaller
  • Discovery:Kubernetes/TorIPCaller
  • Impact:Kubernetes/TorIPCaller
  • Persistence:Kubernetes/TorIPCaller

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

• Amazon GuardDuty User Guide

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions
To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon Identity and Access Management

Amazon Identity and Access Management (IAM) enables you to securely control access to Amazon Web Services in China services and resources for your users. With IAM, you can create and manage Amazon Web Services in China users and groups and use permissions to allow and deny their access to Amazon Web Services in China resources. In some scenarios, you may also want to use Amazon Security Token Service, which lets you grant a trusted user temporary, limited access to your Amazon Web Services in China resources.

Topics

• Region Availability
• Feature Availability and Implementation Differences
• Guides and References
• General Information About Amazon Web Services in China

Region Availability

Amazon Identity and Access Management does not require region selection, but is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of IAM is unique in the following ways:

- Users and credentials – In the Beijing and Ningxia Regions, there is no concept of the "root user" or "account user" credentials. All users are IAM users, including the user who created the account. Administrative IAM users might have permissions to complete tasks that require root user credentials. If they don't, you must contact Support to complete those tasks.

- Forgot password – If an IAM user (including the administrator user) in the Beijing and Ningxia Regions forgets their password, they can reset the password from the Amazon Web Services Management Console. Amazon will send a password reset link to the email address that is associated with the Amazon account. Administrators cannot use a policy to deny access to this
feature because the requestor is not signed in to Amazon. However, each request is stored as a CloudTrail entry. For more information, see IAM Credentials.

- **No hardware or SMS MFA** – The Beijing and Ningxia Regions do not support using hardware or SMS multi-factor authentication (MFA) for IAM users. The Regions do support using virtual MFA. For information about using virtual MFA, see Enabling a Virtual Multi-factor Authentication (MFA) Device.

- **Web identity federation** – Some web identity providers, such as social media platforms, might not be available in the Beijing and Ningxia Regions.

- **IAM control plane** – There is one IAM control plane for all China Regions, which is located in the China (Beijing) Region. Each Amazon Web Services Region has a completely independent instance of the IAM data plane. For more information, see Resilience in Amazon Identity and Access Management.

- **No Amazon STS global endpoint** – In the China Regions, there is no Amazon STS global endpoint. Amazon provides Regional Amazon STS endpoints.

- **Amazon API Signature Version** – In the China (Beijing) Region, the Amazon STS endpoint only supports request Signature Version 4 (SigV4) by default and can be updated to support both SigV4 and Signature Version 4A (SigV4A). Session tokens supporting the SigV4A algorithm are larger than those supporting SigV4 and match the size of tokens issued by the Amazon STS endpoint in the China (Ningxia) Region, which already supports SigV4A. Changing this setting might affect existing systems where you temporarily store tokens. For more information, see Managing Amazon STS in an Amazon Web Services Region.

- Documentation that mentions **Valid only in Amazon Web Services Regions enabled by default** refers to Support only SigV4-based signatures on Amazon Web Services requests for the Amazon STS endpoint in the China (Beijing) Region.

- Documentation that mentions **All Amazon Web Services Regions** refers to Both the SigV4 and SigV4A algorithms for the Amazon STS endpoint in the China (Beijing) Region.

- **Policy names** – IAM policy names can contain only the following Unicode characters: horizontal tab (x09), linefeed (x0A), carriage return (x0D), and characters in the range x20 to xFF. In practice, this means that you can't use Chinese characters in policy names.

- **Service principals in policies** – In IAM policies where the principal is a service, the service principal name can include the following formats, with "service" replaced by the name of the service:

  service.amazonaws.com
Getting Started with Amazon Web Services in China

service.amazonaws.com.cn

Note

Do not try to guess the service principal, because it is case sensitive and the format can vary across Amazon services. The service principal is defined by the service. To learn the service principal for a service, see the documentation for that service. For some services, see Amazon services that work with IAM and look for the services that have Yes in the Service-linked role column. Choose a Yes with a link to view the service-linked role documentation for that service. View the Service-linked role permissions section for that service to view the service principal.

For more information, see Creating a Role to Delegate Permissions to an Amazon Service and Using an IAM Role to Grant Permissions to Applications Running on Amazon EC2 Instances.

- **SSH public keys** – SSH public keys are used only in conjunction with CodeCommit, which is currently not available in the Beijing and Ningxia Regions.

- In the Beijing Region, the Amazon Resource Name (ARN) syntax includes the aws-cn partition for resources in the Region. For example: arn:aws-cn:iam::123456789012:user/division_abc/subdivision_xyz/Zhang.

- In the Ningxia Region, the Amazon Resource Name (ARN) syntax includes the aws-cn partition for resources in the Region. For example: arn:aws-cn:iam::123456789012:user/division_abc/subdivision_xyz/Wang.

- **Switching roles** – In the Beijing Region and Ningxia Region, after you switch to a role in the Amazon Web Services Management Console, you cannot switch back to your original credentials. Instead, you must sign out and then sign in again using the desired credentials.

- Only some Amazon services support service-linked roles in the Beijing and Ningxia Regions. For information about which services support using service-linked roles, see Amazon services that work with IAM and look for the services that have Yes in the Service-Linked Role column. To learn whether the service supports service-linked roles in a specific region, choose the Yes link to view the service-linked role documentation for that service.

- **Access Analyzer** – The Beijing and Ningxia Regions do not support the creation of unused access analyzers. The Beijing and Ningxia Regions do not support the creation of external access analyzers with an organization as the zone of trust. The Beijing and Ningxia Regions do support...
Getting Started with Amazon Web Services in China

creation of an analyzer with the Amazon Web Services account as the zone of trust. For more information, see Enabling Access Analyzer.

- **Last accessed data** – Data about when an IAM identity (user, group, or role) last attempted to access an Amazon service through permissions granted by an IAM policy is not available. For more information, see Service Last Accessed Data.

- **Role last used** – Information about when a role was last used is not available. For more information, see View Role Access.

- **Custom policy checks** – Custom policy checks are not supported in the Beijing and Ningxia Regions. To learn more, see IAM Access Analyzer custom policy checks in the IAM User Guide.

- **Policy generation** – Policy generation is not supported in the Beijing and Ningxia Regions. To learn more, see Generate policies based on access activity in the IAM User Guide.

- **IAM Roles Anywhere** – The Beijing and Ningxia Regions do not support the creation of trust anchors with Amazon Private Certificate Authority. The Beijing and Ningxia Regions do support the creation of a trust anchor with your own certificate authority. To learn more, see Creating a trust anchor and profile in the IAM Roles Anywhere User Guide.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Availability Zones for the China Regions

• In the Beijing Region, there are three Availability Zones.

• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.

• EC2-Classic Platform
  • The EC2-Classic platform is not supported.

• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console
The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**IAM Identity Center**

With IAM Identity Center, you can create or connect workforce users and centrally manage their access across all their Amazon Web Services accounts and applications. You can use multi-account permissions to assign your workforce users access to Amazon Web Services accounts. You can use application assignments to assign your users access to Amazon Web Services managed and customer managed applications.

**Topics**

- [Region Availability](#)
- [Feature Availability and Implementation Differences](#)
- [Guides and References](#)
- [General Information About Amazon Web Services in China](#)

**Region Availability**

IAM Identity Center is available in the following Regions in China:

- China (Beijing) Region
- China (Ningxia) Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of IAM Identity Center is unique in the following way:
• IAM Identity Center integrates with Amazon Organizations to manage access across your Amazon Web Services accounts, and therefore, IAM Identity Center is subject to any Amazon Organizations differences.

• The Amazon Web Services access portal URL has a URL pattern of https://start.home.awsapps.cn/directory/[IdentityStoreId] or https://start.home.awsapps.cn/directory/[CustomAlias]. You can find this URL on the Settings page in the IAM Identity Center console.

• The Amazon Resource Name (ARN) for your IAM Identity Center instance has a pattern of arn:aws-cn:sso:::instance/[InstanceId] You can find this ARN on the Settings page in the IAM Identity Center console.

• The ARNs for IAM Identity Center permission sets has a pattern of arn:aws-cn:sso:::permissionSet/[InstanceId]/[PermissionSetID] You can find these ARNs on the Permission sets tab under the Amazon Web Services accounts page in the IAM Identity Center console.

• The email address no-reply@login.awsapps.cn is used for sending email-verification, password reset, and user invitation emails in the Beijing and Ningxia Regions. The email address no-reply@signin.amazonaws.com.cn is used for sending forgotten password emails.

• Google Workspace (formerly G Suite) is not available in China.

• The solutions provided by Amazon Security Competency partners CyberArk, Ermetic, and Okta are not hosted in China. Their capabilities and integration with IAM Identity Center for the purposes of temporary elevated access management have not been tested with IAM Identity Center in China.

• Single sign-on to Amazon EC2 Windows instances for IAM Identity Center users is not supported.

• IAM Identity Center integrates with Amazon Web Services applications to provide single sign-on and centralized identity and access management for those applications. The Amazon Web Services products page lists the Amazon Web Services applications available in China. Refer to the China-specific user guide of an Amazon Web Services application for details on its integration with IAM Identity Center.

• The application and identity providers referenced in the IAM Identity Center documentation are third parties. Their instances may be located outside of China. Customers should verify the location of the instances with the third-party providers directly, and customers should confirm whether any cross-border transfers of data comply with their obligations under applicable laws. If customers use the services offered by these third parties, customers may experience higher latency due to reasons beyond the control of Amazon (for example, if the third party's
servers are outside of China), and customers should work with the third-party provider directly to address latency.

• The cloud application, External Amazon Web Services Account, is presently not available in the cloud application catalog. If you need to configure a federation to an Amazon Web Services account, which is not part of the same Amazon organization, you can use a custom SAML application. Instructions on how to set up the federation in the account are available in IAM User Guide.

• Amazon Web Services China (Beijing) Region, operated by Sinnet, and Amazon Web Services China (Ningxia) Region, operated by NWCD, are enabled by default. Therefore, they do not need to be manually enabled.

• The following Amazon Web Services managed application is supported for account instances of IAM Identity Center:
  • Amazon S3 Access Grants

• If you filter access to specific Amazon Web Services domains by using a web content filtering solution such as next-generation firewalls (NGFW) or Secure Web Gateways (SWG), you must add the following domains to your web-content filtering solution allowlists. Doing so enables you to access your Amazon Web Services access portal.
  • start.home.awsapps.cn
  • start.[Region].home.awsapps.cn
  • oidc.[Region].amazonaws.com.cn
  • *.applicationcatalog.amazonaws.com.cn
  • *.sso.[Region].amazonaws.com.cn
  • *.sso.amazonaws.cn
  • *.sso-portal.[Region].amazonaws.com.cn
  • *.sso.[Region].amazonaws.cn
  • aws-access-portal-website-prod-bjs-assets.s3.cn-north-1.amazonaws.com.cn
  • aws-access-portal-website-prod-zhy-assets.s3.cn-northwest-1.amazonaws.com.cn
  • s3.cn-north-1.amazonaws.com.cn/awsconsole-peregrine-portal-prod-bjs-assets
  • s3.cn-northwest-1.amazonaws.com.cn/awsconsole-peregrine-portal-prod-zhy-assets
Getting Started with Amazon Web Services in China

Amazon Inspector

Amazon Inspector is a security vulnerability management service that helps improve the security and compliance of your Amazon resources. Amazon Inspector automatically assesses resources for vulnerabilities or deviations from best practices, and then produces a detailed list of security findings prioritized by level of severity. Amazon Inspector includes a knowledge base of hundreds of rules mapped to common security standards and vulnerability definitions that are regularly updated by Amazon security researchers.

**Amazon IoT**

Amazon IoT provides secure, bi-directional communication between Internet-connected things (such as sensors, actuators, embedded devices, or smart appliances) and the Amazon Cloud. This enables you to collect telemetry data from multiple devices and store and analyze the data. You can also create applications that enable your users to control these devices from their phones or tablets. Amazon IoT includes Amazon IoT Device Management and Amazon IoT Device Defender. Amazon IoT Device Defender allows you to audit the configuration of your devices, monitor your connected devices to detect abnormal behavior, and to mitigate security risks. It gives you the ability to enforce consistent security policies across your Amazon IoT device fleet and respond quickly when devices are compromised.

- Amazon IoT Device Management API Reference

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China
The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon IoT Analytics

Amazon IoT Analytics is a managed service that provides advanced data analysis for IoT devices. Amazon IoT Analytics lets you collect, process, and store IoT data in a time-series data store. You can then analyze the data by running queries.

Topics
- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Amazon IoT Analytics is available in the following regions in China:

- Beijing Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon IoT Analytics is unique in the following ways:

- Amazon QuickSight is not supported in the Beijing Region.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
• Service principal values vary by Region.

• EC2-Classic Platform
  • The EC2-Classic platform is not supported.

• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon IoT Events

Amazon IoT Events is a managed service that lets you monitor your equipment or device fleets for failures or changes in operation, and trigger actions when such events occur.

Topics

• Region Availability
• Feature Availability and Implementation Differences
• Guides and References
• General Information About Amazon Web Services in China

Region Availability

Amazon IoT Events is available in the following regions in China:

• Beijing Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon IoT Events is unique in the following ways:

- No differences.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon IoT Greengrass

Amazon IoT Greengrass seamlessly extends Amazon onto physical devices so they can act locally on the data they generate, while still using the cloud for management, analytics, and durable storage. Amazon IoT Greengrass ensures your devices can respond quickly to local events and operate with intermittent connectivity. Amazon IoT Greengrass minimizes the cost of transmitting data to the cloud by enabling you to author custom software and Amazon Lambda functions that run on local devices.

  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples
The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon IoT Greengrass Version 1**

Amazon IoT Greengrass seamlessly extends Amazon onto physical devices so they can act locally on the data they generate, while still using the cloud for management, analytics, and durable storage. Amazon IoT Greengrass ensures your devices can respond quickly to local events and operate with intermittent connectivity. Amazon IoT Greengrass minimizes the cost of transmitting data to the cloud by enabling you to author custom software and Amazon Lambda functions that run on local devices.

**Region Availability**

Amazon IoT Greengrass V1 is available in the following regions in China:

- Beijing Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of Amazon IoT Greengrass is unique in the following ways:

- Currently, Amazon IoT Greengrass V1 is available in the Beijing Region only.
- Amazon IoT Greengrass Core software v1.9.2 is the minimum supported version in the Beijing Region.
- The following minimum versions of the Amazon IoT Greengrass Core SDK are supported:

<table>
<thead>
<tr>
<th>Language or platform</th>
<th>Minimum version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Python 3.7</td>
<td>1.4.0</td>
</tr>
<tr>
<td>Java 8</td>
<td>1.3.1</td>
</tr>
<tr>
<td>Node.js 8.10</td>
<td>1.4.0</td>
</tr>
<tr>
<td>C, C++</td>
<td>1.1.0</td>
</tr>
</tbody>
</table>
• The Beijing Region only supports Amazon Trust Services (ATS) server authentication, so you must use ATS-signed root CA certificates and ATS endpoints. For more information, see [Server Authentication](#) in the Amazon IoT guide.

• Amazon Trust Services (ATS) endpoints in the China region are different from other global endpoints. For example, the Amazon IoT Greengrass V1 ATS endpoint in the Beijing Region is `greengrass.ats.iot.cn-north-1.amazonaws.com.cn`. For more information, see [China (Beijing) Region Endpoints](#) in the Amazon Web Services General Reference.

• The default maximum number of transactions per second (TPS) on the Amazon IoT Greengrass V1 API is 10. For more information, see [Amazon IoT Greengrass Limits](#) in the Amazon Web Services General Reference.

• Currently, only the following connectors are supported in the Beijing Region:
  • Modbus-RTU Protocol Adapter connector, v2
  • Raspberry Pi GPIO connector, v2
  • Serial Stream connector, v2
  • Docker application deployment connector, v4, v5, v6, and v7. Connector versions earlier than v7 don't support using secrets to access Docker images from private container registries or from Amazon Web Services Marketplace.

• Currently, Amazon IoT Device Tester for Amazon IoT Greengrass V1 is not supported in the Beijing Region.

• Currently, VPC endpoints (Amazon PrivateLink) for Amazon IoT Greengrass V1 are not supported in the Beijing Region.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
Getting Started with Amazon Web Services in China

- EC2-Classic Platform
  - The EC2-Classic platform is not supported.

- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon IoT Greengrass Version 2

Amazon IoT Greengrass seamlessly extends Amazon onto physical devices so they can act locally on the data they generate, while still using the cloud for management, analytics, and durable storage. Amazon IoT Greengrass ensures your devices can respond quickly to local events and operate with intermittent connectivity. Amazon IoT Greengrass minimizes the cost of transmitting data to the cloud by enabling you to author custom software and Amazon Lambda functions that run on local devices.

Region Availability

Amazon IoT Greengrass V2 is available in the following regions in China:

- Beijing Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon IoT Greengrass V2 is unique in the following ways:

- Currently, Amazon IoT Greengrass V2 is available in the Beijing Region only.
• Amazon IoT Greengrass nucleus v2.0.5 is the minimum supported version in the Beijing Region.

• Secret manager v2.0.5 is the minimum supported version in the Beijing Region.

• The Beijing Region only supports Amazon Trust Services (ATS) server authentication, so you must use ATS-signed root CA certificates and ATS endpoints. For more information, see Server Authentication in the Amazon IoT guide.

• Amazon Trust Services (ATS) endpoints in the China region are different from other global endpoints. For example, the Amazon IoT Greengrass V2 ATS endpoint in the Beijing Region is greengrass.ats.iot.cn-north-1.amazonaws.com.cn. For more information, see China (Beijing) Region Endpoints in the Amazon Web Services General Reference.

• Currently, Amazon IoT Device Tester for Amazon IoT Greengrass V2 is not supported in the Beijing Region.

• Currently, VPC endpoints (Amazon PrivateLink) for Amazon IoT Greengrass V2 are not supported in the Beijing Region.

• Currently, Amazon Lookout for Vision is not supported in the Beijing Region.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Amazon Key Management Service

Amazon Key Management Service (Amazon KMS) makes it easy for you to create and manage keys and control the use of encryption across a wide range of Amazon services and in your applications. Amazon KMS is a secure and resilient service that uses hardware security modules to protect your keys. Amazon KMS is integrated with Amazon CloudTrail to provide you with logs of all key usage to help meet your regulatory and compliance needs.

Topics

• Region Availability
• Feature Availability and Implementation Differences
• Guides and References
• General Information About Amazon Web Services in China

Region Availability

Amazon Key Management Service is available in the following regions in China:

• Beijing Region
• Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Key Management Service is unique in the following ways:

- The hardware security modules (HSMs) that Amazon KMS uses to protect KMS keys in the China Regions comply with all pertinent Chinese regulations. Amazon KMS uses OSCCA certified HSMs to protect KMS keys in China Regions. However, KMS HSMs in China Regions have not been validated under the [FIPS 140-2 Cryptographic Module Validation Program](https://csrc.nist.gov/publications/detail/fips/140/2/).  
- To **import key material** into a symmetric encryption Amazon KMS key in China Regions, the key material must be 128-bits of binary data. Amazon KMS supports the SM2PKE wrapping algorithm in China Regions for wrapping imported RSA, ECC, and SM2 key material.
- The Custom Key Stores feature is not available in the China Regions.  

The following custom key store management APIs are not supported:

- ConnectCustomKeyStore
- CreateCustomKeyStore
- DeleteCustomKeyStore
- DescribeCustomKeyStores
- DisconnectCustomKeyStore
- UpdateCustomKeyStore

If you attempt to use these APIs, you will get an `UnknownOperationException` exception.

- Amazon services that integrate with Amazon KMS in other Amazon Regions might not be integrated in the China Regions, even if those services are available in the China Regions. To find a list of services that integrate with Amazon KMS in the China Regions, see [Amazon Service Integration](https://docs.aws.amazon.com/service-authorization/latest/reference/services/integrations.html).

- The [Amazon KMS Cryptographic Details](https://docs.aws.amazon.com/kms/latest/developerguide/cryptographic-details.html) documentation that is discussed in the Amazon Key Management Service Developer Guide does not describe the implementation of Amazon KMS in the China Regions.

- The Hybrid Post-Quantum TLS feature, which enables you to use hybrid post-quantum TLS key exchange algorithms for your requests to Amazon KMS, is not available in the China Regions.

- Amazon KMS supports Transport Layer Security (TLS) 1.0—1.3 for endpoints in China Regions.
• Multi-Region keys are not available in the China Regions. You cannot create multi-Region primary keys or multi-Region replica keys in the aws-cn partition. As a result, the following APIs are not supported:
  • ReplicateKey
  • UpdatePrimaryRegion

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

• Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
• For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.
Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon Keyspaces (for Apache Cassandra)

Amazon Keyspaces (for Apache Cassandra) is a scalable, highly available, and managed Apache Cassandra–compatible database service.

Topics

• Region Availability
• Feature Availability and Implementation Differences
• Guides and References
• General Information About Amazon Web Services in China

Region Availability

Amazon Keyspaces (for Apache Cassandra) is available in the following regions in China:

• Beijing Region
• Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Keyspaces is unique in the following ways:

• Service-specific credentials for Amazon Keyspaces are associated with a specific Amazon Identity and Access Management (IAM) user. To access Amazon Keyspaces in the Beijing and Ningxia Regions, you must use service-specific credentials for IAM users in these Regions. You cannot use service specific credentials for IAM users created for other Amazon Regions.

• Amazon Keyspaces Multi-Region Replication is not supported.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some
features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.
• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

**Amazon Web Services Console**

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon Kinesis Streams**

Kinesis is a platform for streaming data on Amazon, offering managed services to make it easy to load and analyze streaming data, and also providing the ability for you to build custom streaming data applications for specialized needs.

Amazon Kinesis Streams is a managed service that scales elastically for real-time processing of streaming data at a massive scale. The service collects large streams of data records that can then be consumed in real time by multiple data-processing applications that can be run on EC2 instances.

**Note**

Amazon Kinesis Analytics is not available in the China Regions.

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Lake Formation

Amazon Lake Formation is a managed service that makes it easy to set up, secure, and manage your data lakes. Lake Formation helps you discover your data sources and catalog, cleanse, and transform the data. You can use Lake Formation to secure and ingest the data in an Amazon Simple Storage Service (Amazon S3) data lake.

Topics
Region Availability

Amazon Lake Formation is available in the following regions in China:

- Beijing Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Lake Formation is unique in the following ways:

- Granting Lake Formation permissions across accounts is not supported. Using Amazon analytics services such as Amazon Athena in one account to access data that is secured by Lake Formation permissions on Data Catalog tables in another account is not supported.
- Amazon QuickSight integration with Lake Formation is not supported.

Guides and References

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Lambda

Amazon Lambda is a compute service that lets you run code without provisioning or managing servers. Amazon Lambda executes your code only when needed and scales automatically, from a few requests per day to thousands per second. You pay only for the compute time you consume — there is no charge when your code is not running. With Amazon Lambda, you can run code for virtually any type of application or backend service—all with zero administration. Amazon Lambda runs your code on a high-availability compute infrastructure and performs all of the administration of the compute resources, including server and operating system maintenance, capacity provisioning and automatic scaling, code monitoring and logging. All you need to do is supply your code in one of the languages that Amazon Lambda supports (currently Node.js, Java, C#, Go and Python).

Region Availability

Amazon Lambda is available in the following regions in China:
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Lambda is unique in the following ways:

- Amazon X-Ray integration with Lambda functions is not available in the China Regions.
- Amazon Lambda Function URLs is not available in the China Regions.
- Lambda SnapStart is not available in the China Regions.
- The asynchronous invocation metrics, AsyncEventsReceived, AsyncEventAge, and AsyncEventsDropped are not available in the China Regions.
- The Amazon Linux 2023 provided.al2023 runtime is not available in the China Regions.
- The Node.js 20 runtime (nodejs20.x) is not available in the China Regions.
- The Java 21 runtime (java21) is not available in the China Regions.
- Multi-VPC connectivity for Amazon MSK event source mappings is not available in the China Regions.
- The Python 3.12 runtime (python3.12) is not available in the China Regions.
- The Future runtime launch dates are not applicable in the China Regions.
- Lambda Advanced Logging Controls are not available in the China Regions.
- The Ruby 3.3 (ruby3.3) runtime is not available in the China Regions.
- The .NET 8 (dotnet8) runtime is not yet available in the China Regions. To give customers time to migrate from .NET 6 to .NET 8 after .NET 8 is released, Lambda will continue to support .NET 6 in the China Regions for at least 6 months after the release of .NET 8. During that time, Lambda will apply patches to the .NET 6 operating system (OS), but not to the .NET 6 language runtime.

Amazon License Manager

Amazon License Manager makes it easier to manage licenses in Amazon and on-premises servers from software vendors such as Microsoft, SAP, Oracle, and IBM. Amazon License Manager lets administrators create customized licensing rules that emulate the terms of their licensing agreements, and then enforces these rules when an instance of EC2 gets launched. Administrators can use these rules to limit licensing violations, such as using more licenses than an agreement stipulates or reassigning licenses to different servers on a short-term basis. The rules in Amazon License Manager enable you to limit a licensing breach by stopping the instance from launching or by notifying administrators about the infringement. Administrators gain control and visibility of all their licenses with the Amazon License Manager dashboard and reduce the risk of non-compliance, misreporting, and additional costs due to licensing overages.

Topics

• Region Availability
• Feature Availability and Implementation Differences
Region Availability

Amazon License Manager is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon License Manager is unique in the following ways:

- Software vendors can issue licenses for only Amazon. Token generation for license consumption outside of Amazon is not supported.
- License sharing using Resource share is not available.
- The user-based subscriptions feature is not available.

Amazon Launch Wizard

Amazon Launch Wizard helps you reduce the time that it takes to deploy application and domain-controller solutions to the cloud. You provide your application or domain controller requirements, and Amazon Launch Wizard identifies the right Amazon resources to deploy and run your solution. Amazon Launch Wizard provisions and configures the selected resources in a few hours to create fully-functioning, production-ready applications or domain controllers. It also creates custom Amazon CloudFormation templates, which you can reuse and customize for subsequent deployments.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.

• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon ParallelCluster

Amazon ParallelCluster is an Amazon supported open source cluster management tool that helps you to deploy and manage high performance computing (HPC) clusters in the Amazon Web Services Cloud.

Topics

• Region Availability
• Feature Availability and Implementation Differences
• Guides and References
• General Information About Amazon Web Services in China

Region Availability

Amazon ParallelCluster is available in the following regions in China:

• Beijing Region
• Ningxia Region
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon ParallelCluster is unique in the following ways:

- Elastic Fabric Adapter (EFA) is not supported.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.
Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon Personalize

Amazon Personalize is a machine learning service that makes it easy for developers to add individualized recommendations to customers who use their applications. It reflects the vast experience that Amazon has in building personalization systems.

You can use Amazon Personalize in a variety of scenarios, such as giving users recommendations based on their preferences and behavior, personalized re-ranking of results, and personalizing content for emails and notifications.

Region Availability

Amazon QuickSight is available in the following regions in China:
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of QuickSight is unique in the following ways:

- QuickSight Standard Edition accounts are not supported in Beijing Region. Only QuickSight Enterprise edition is available.
- IAM-federated identities and QuickSight managed users are not available for new QuickSight account subscriptions. The following identity methods are available in Beijing Region:
  - IAM Identity Center
  - Active Directory
- Amazon QuickSight Q is not supported in Beijing Region.
- The Amazon QuickSight mobile app is not supported in Beijing Region.
- Geospatial maps are not supported for analyses in Beijing Region.
- The following data source types are not available in Beijing Region:
  - Amazon IoT
  - Amazon Timestream
  - Adobe Analytics
  - GitHub
  - Jira
  - Salesforce
  - ServiceNow
- Namespaces to support multitenancy and isolation within the same QuickSight account are not supported in Beijing Region. Only the default namespace is supported.
- Granting access to a dashboard to anyone on the internet (globally or domestic) is not supported in Beijing Region.
- Service built-in tutorial videos are not available in Beijing Region.
- Custom email report templates are not supported in Beijing Region.
- New users can't be added to a QuickSight account through the Admin console. To add a new user to a QuickSight account, use the Amazon QuickSight API.

Amazon Redshift

Amazon Redshift is an enterprise-level, petabyte-scale, fully managed, data warehousing service.

Topics
• Region Availability
Region Availability

Amazon Redshift and Amazon Redshift Spectrum are available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Redshift is unique in the following ways:

- You can launch an Amazon Redshift cluster only in an EC2-VPC platform. EC2-Classic is not supported.
- Database encryption is supported only when using a default encryption key assigned by Amazon Redshift or when using Amazon Key Management Service (Amazon KMS). Amazon CloudHSM is not supported.
- Cross-region features, such as snapshot copying across regions and COPY from another region, are currently supported only between the Beijing and Ningxia Regions.
- The following node types are available:
  - dc2.large
  - dc2.8xlarge
- The Amazon Redshift Getting Started Guide guide and some tutorials in the Amazon Redshift Database Developer Guide use sample data hosted on Amazon S3 buckets that are not accessible in the Beijing and Ningxia Regions.
- Amazon Redshift Serverless is now generally available in China (Beijing) Region.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only

Region Availability

Amazon Relational Database Service is available in the following regions in China:

• Beijing Region
• Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon RDS is unique in the following ways:

• Cross-region features, such as DB snapshot copying across regions and read replication across multiple regions, are currently not supported between the Beijing Region and other non-China Regions.

• Backup and maintenance windows:
  • If you don’t specify a preferred backup window when you create the DB instance, Amazon RDS assigns a default 30-minute backup window which is selected at random from between 06:00 and 14:00 UTC.
  • If you don’t specify a preferred maintenance window when you create the DB instance, Amazon RDS assigns a default 30-minute maintenance window on a randomly selected day of the week from between 06:00 and 14:00 UTC.

• For current information on DB Instance classes, see Amazon RDS Pricing.

• You can have up to 20 manual snapshots for your account in the Beijing and Ningxia Regions.

• Since the Ningxia Region uses a unique certificate authority (CA), update your DB instances for the Ningxia Region to use the Region-specific certificate identified by rds-ca-rsa2048-g1 in DescribeCertificates calls as soon as possible. The remaining instructions described in the Rotating your SSL/TLS certificate topic are the same, except for the certificate identifier.
Guides and References

Region Availability

Amazon Resource Access Manager is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon RAM is unique in the following ways:

- **Resources that are not supported for sharing** – Unless otherwise noted, Amazon RAM does not support resource sharing for the following services in the Beijing and Ningxia Regions:
  - Amazon App Mesh
  - Amazon Aurora
  - Amazon Private Certificate Authority
  - Amazon License Manager
  - Amazon Network Firewall
  - Amazon Outposts
  - Amazon Resource Groups
  - Amazon Route 53
  - The following resource type is not supported for sharing in the Beijing and Ningxia Regions: Route 53 resolver firewall groups.
  - Amazon Systems Manager Incident Manager
Amazon VPC

The following resource type is not supported for sharing in the Beijing and Ningxia Regions: prefix lists.

Resources that are supported for sharing with limitations – Unless otherwise noted, in the Beijing and Ningxia Regions, Amazon RAM does not support resource sharing for the following services within Amazon Organizations. However, you can still share resources with individual Amazon Web Services accounts. For supported resource types, you can also share resources with IAM roles or IAM users who are outside your organization. In this case, these principals are treated as external principals. They receive an invitation to join the resource share, and they must accept the invitation to gain access to the shared resources.

- Amazon RAM API Reference

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions
To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see [Signup, Accounts, and Credentials](#).

### Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is [www.amazonaws.cn](http://www.amazonaws.cn).

### Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see [Endpoints and ARNs for Amazon Web Services in China](#).

### Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

### General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.
Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Resource Groups

Amazon Resource Groups lets you organize Amazon resources into groups, tag resources using virtually any criteria, and manage, monitor, and automate tasks on grouped resources.

Topics

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

Region Availability

Amazon Resource Groups is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Resource Groups is unique in the following ways:

- Group lifecycle events are not supported.
• Capacity Reservations are supported, but no other Service-linked resource groups are supported at this time. This means that you can attach only the Capacity Reservation service configuration to a resource group.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

• Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
• For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)
Getting Started with Amazon Web Services in China

For information about endpoints and ARNs in Amazon Web Services in China, see [Endpoints and ARNs for Amazon Web Services in China](#).

**Availability Zones for the China Regions**

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

**General Information for Amazon Web Services in China**

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

**Amazon Web Services Console**

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon Route 53**

Amazon Route 53 is a highly available and scalable Domain Name System (DNS) web service.
Region Availability

Amazon Route 53 is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Route 53 is unique in the following ways:

- You can't use Route 53 to register domains. However, you can create a hosted zone in one of the China Regions, and associate the name servers for that hosted zone with a domain that you registered using a global account or that you registered with another domain registrar.
- The TestDNSAnswer API is not available.
- Traffic flow is not available.
- Public DNS query logs are not available.
- DNS query metrics for public hosted zones are not available.
- You can't create alias records that route traffic to Amazon resources outside the China Regions.
- You can't create records that use the geoproximity routing policy. That routing policy is available only for traffic flow.
- When creating alias records programmatically and routing traffic to an Amazon CloudFront distribution, use the following hosted zone ID: Z3RFFRIM2A3IF5.
- You can add an alias record to an Amazon Elastic Beanstalk environment in Ningxia Region only by using the ChangeResourceRecordSets API, but not on the console. When you programmatically create an alias record to an Amazon Elastic Beanstalk, use the following hosted zone ID: ZB5H67MZE5736.
• Recursive DNS resolvers can only use IPv4 transport to submit DNS queries to Amazon Route 53.

• Route 53 DNSSEC signing is not supported in China.

• Route 53 Resolver DNS Firewall is supported in China with the following differences:
  • You can use Amazon Resource Access Manager to share DNS Firewall rule groups with Amazon Web Services accounts.

• Route 53 Profiles are not available.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

• Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.

• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.

• For more information, see Signup, Accounts, and Credentials.
Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- EC2-Classic Platform
  - The EC2-Classic platform is not supported.
- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples
The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon Route 53 Application Recovery Controller**

Amazon Route 53 Application Recovery Controller (Route 53 ARC) provides three distinct capabilities: *readiness checks, routing controls, and zonal shifts*. With Route 53 ARC, you can gain insights into whether your applications and resources are prepared for recovery, and quickly mitigate impairments for a multi-Availability Zone or multi-Region application. Route 53 ARC helps you prepare for and accomplish faster recovery operations for applications running on Amazon.

Zonal shift and zonal autoshift in Route 53 ARC are available in the Beijing and Ningxia Regions. Zonal shift helps you manage and coordinate recovery for Amazon applications by enabling you to manually shift load balancer away from an unhealthy Availability Zone (AZ) to healthy AZs. Zonal autoshift is a feature that you can enable to have Amazon safely and automatically shift your application's traffic away from an AZ when Amazon identifies a potential failure affecting that AZ. Temporarily moving traffic for a resource away from an unhealthy AZ helps your application recover quickly, minimizing impact for your customers.

**Topics**

- Region Availability
- Feature Availability and Implementation Differences
- Guides and References
- General Information About Amazon Web Services in China

**Region Availability**

Amazon Route 53 Application Recovery Controller is available in the following Regions in China:

- China (Beijing) Region
- China (Ningxia) Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of Amazon Route 53 Application Recovery Controller is unique in the following way:
• The routing control and readiness check capabilities of the Route 53 ARC service are not available in the Beijing and Ningxia Regions.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. - General Information About Amazon Web Services in China

Region Availability

Amazon SageMaker is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon SageMaker is unique in the following ways:

The following SageMaker features are not supported in the Beijing and Ningxia Regions:

- Amazon Augmented AI (Amazon A2I)
- Amazon SageMaker Canvas
- Amazon SageMaker Edge Manager
- Amazon SageMaker Elastic Inference
- Amazon SageMaker geospatial capabilities
- Amazon SageMaker Ground Truth
- Amazon SageMaker Ground Truth Plus
- Amazon SageMaker Inference Recommender
- Amazon SageMaker model registry and projects
- Reinforcement learning
- Amazon SageMaker Serverless Inference
- Amazon SageMaker Studio, the new integrated development environment (IDE) for machine learning in SageMaker. However, the previous Amazon SageMaker Studio experience, now named Amazon SageMaker Studio Classic is available.
• Amazon SageMaker Studio Lab
• Amazon SageMaker Training Compiler

The following SageMaker features are limited in the Beijing and Ningxia Regions:
• Amazon SageMaker Domain: On-boarding with Amazon SageMaker Domain is limited to Amazon Identity and Access Management (IAM).
• Amazon SageMaker Autopilot: Configuring the default parameters of a SageMaker Autopilot experiment (for administrators) is not supported.
• Amazon SageMaker JumpStart is only supported in Beijing Region.
• The following features are not available for Amazon SageMaker Inference.
  • Multi-model endpoints on GPU instances
  • Graviton-based, Inferentia-based, p4d, and g5 instance types
  • Increased shared memory size to almost half of instance memory
  • Deployment guardrails
  • EndpointConfig parameters ContainerStartupHealthCheckTimeoutInSeconds, ModelDataDownloadTimeoutInSeconds, and VolumeSizeInGB
• Amazon Web Services Marketplace China: You can't create and list your SageMaker artifacts in Amazon Web Services Marketplace China.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Security Hub

Amazon Security Hub provides you with a comprehensive view of the security state of your Amazon resources. Security Hub collects security data from across Amazon Web Services accounts and services, and helps you analyze your security trends to identify and prioritize the security issues across your Amazon Web Services environment.

Topics
Region Availability

Amazon Security Hub is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Security Hub is unique in the following ways:

- **Third-party partner integrations**
  - Not all integrations are supported in the Beijing and Ningxia Regions. For a list of the integrations that are supported, see [integrations that are supported in China (Beijing) Region and China (Ningxia) Region](integrations.html) in the Amazon Security Hub Guide.

- **Standards**
  - All security standards are supported in the Beijing and Ningxia Regions, except Service-Managed Standard: Amazon Control Tower.

- **Controls**
  - Not all security controls are supported in the Beijing and Ningxia Regions. See the following lists in the Amazon Security Hub Guide.
    - [Controls that are not supported in China (Beijing) Region](controls.html)
    - [Controls that are not supported in China (Ningxia)](controls.html)

- **Cross-Region aggregation**
  - Cross-Region aggregation is supported with limitations in the Beijing and Ningxia Regions. In these Regions, cross-Region aggregation is supported only for findings, finding updates, and insights across China. Specifically, you can only aggregate findings, finding updates, and insights between Beijing and Ningxia.
Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

General Information About Amazon Web Services in China

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions
• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Server Migration Service

Amazon Server Migration Service automates the migration of your on-premises VMware vSphere or Microsoft Hyper-V/SCVMM virtual machines to the Amazon Web Services Cloud. Amazon SMS incrementally replicates your server VMs as cloud-hosted Amazon Machine Images (AMIs) ready for deployment on Amazon EC2. Working with AMIs, you can easily test and update your cloud-based images before deploying them in production.

**Amazon Simple Storage Service**

Amazon S3 is storage for the Internet. It provides a simple web service interface that can be used to store and retrieve any amount of data, at any time, from anywhere on the web. It gives any developer access to the same highly scalable, reliable, secure, fast, inexpensive infrastructure that Amazon uses to run its own global network of web sites. The service aims to maximize benefits of scale and to pass those benefits on to developers.

**Topics**

- [Region Availability](#)
- [Feature Availability and Implementation Differences](#)
- [Guides and References](#)
- [General Information About Amazon Web Services in China](#)

**Region Availability**

Amazon S3 is available in the following regions in China:

- Beijing Region
- Ningxia Region

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of Amazon S3 is unique in the following ways:

- Creating an Amazon Web Services account
Getting Started with Amazon Web Services in China

To publish content in the Beijing and Ningxia Regions, you must sign up for an Amazon Web Services in China account, which is specific to the Beijing and Ningxia Regions. This account will not work in other Amazon Regions, and an account that was created in a different Region will not work in the China Regions. For information about signing up for the Beijing Region, see .

- Filing for Internet Content Provider (ICP) recordal:

  If you want to publish content in the China (Beijing) or China (Ningxia) Regions that can be read without authentication, you must obtain an ICP license. For information about filing for ICP recordal, see .

- If you want to deposit reports into an Amazon S3 bucket, in your policy, you must specify 145026535362 (instead of 386209384616) for the account ID. For more information, see Example 8: Deposit Reports into an Amazon S3 Bucket in the Amazon Billing User Guide.

- Although the Detailed Billing Report feature is unavailable for many new customers as of July 2019, this feature remains available in the Beijing and Ningxia Regions.

- The following Amazon S3 features are either unavailable in the China Regions or require an ICP license:

  - Amazon S3 objects honor anonymous GET requests only if the object owner's Amazon Web Services in China account is associated with a valid ICP license. As a result, hosting a static website from an Amazon S3 bucket and using pre-signed URLs require an ICP license.

  - Amazon S3 supports both the Signature Version 4 and Signature Version 2; however, only Signature Version 4 is supported in the China Regions. For information about Signature Version 4 authorization headers, see Authenticating Requests (Amazon Signature Version 4).

- Website hosting:

  - In accordance with Chinese laws and regulations, ports 80/8080/443 are closed by default in the China Regions.

  - You can configure your bucket to host a static website, but it is recommended that your Amazon Web Services in China account is associated with an ICP license. To apply for an ICP license, follow the ICP Recordal steps.

  - In Amazon S3, support for custom domain names relies on Amazon Route 53. Route 53 is available in the China (Ningxia) Region to create and manage DNS records for an existing domain. To configure a custom domain name for a static website hosted in Amazon S3, see Setting up a static website using a custom domain in the Amazon S3 User Guide. For a complete list of Amazon S3 website endpoints and Route 53 Hosted Zone IDs, see Amazon S3 website endpoints in the Amazon General Reference.
• Presigned URLs work only if the resource owner has an ICP license.

Your request must provide credentials explicitly. Any other form of request is considered anonymous, including the presigned URL. Anonymous requests are allowed only if the resource owner has an ICP license.

Because a signing key in Signature Version 4 is valid for only seven days, presigned URLs are also valid for up to seven days.

Presigned URLs aren’t supported in the S3 console.

• S3 Object Lambda Access Points in China (Beijing) (cn-north-1) and China (Ningxia) (cn-northwest-1) don’t support authentication with presigned urls. It is advised that you make authenticated calls directly to the S3 Object Lambda Access Point.

• Any copy operation between the China Regions and Amazon Web Services Regions outside of China is not supported.

• Cross-region replication (CRR) is not supported between the China Regions and Amazon Web Services Regions outside of China.

• Amazon S3 Transfer Acceleration is not supported in Beijing and Ningxia Regions.

• Bucket permissions check in the Amazon S3 console is not supported in Beijing and Ningxia Regions.

• Amazon S3 Multi-Region Access Points is not available in the China Regions.

• Amazon S3 Express One Zone is not available in the China Regions.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Simple Queue Service

Amazon Simple Queue Service (Amazon SQS) offers a reliable, highly-scalable hosted queue for storing messages as they travel between applications or microservices. It moves data between distributed application components and helps you decouple these components. Amazon SQS provides familiar middleware constructs such as dead-letter queues and poison-pill management. It also provides a generic web services API and can be accessed by any programming language that the Amazon SDK supports. Amazon SQS supports both standard and FIFO queues.

To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

• Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
• Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
• For more information, see Signup, Accounts, and Credentials.
Getting Started with Amazon Web Services in China

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.

- EC2-Classic Platform
  - The EC2-Classic platform is not supported.

- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples
The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Amazon Simple Workflow Service**

The Amazon Simple Workflow Service (Amazon SWF) makes it easy to build applications that coordinate work across distributed components. In Amazon SWF, a task represents a logical unit of work that is performed by a component of your application. Coordinating tasks across the application involves managing intertask dependencies, scheduling, and concurrency in accordance with the logical flow of the application. Amazon SWF gives you full control over implementing tasks and coordinating them without worrying about underlying complexities such as tracking their progress and maintaining their state.

Amazon Step Functions

Amazon Step Functions lets you coordinate the components of distributed applications and microservices using visual workflows. Step Functions provides a reliable way to coordinate components and step through the functions of your application. Step Functions provides a graphical console to visualize the components of your application as a series of steps. It automatically triggers and tracks each step, and retries when there are errors, so your application executes in order and as expected, every time. Step Functions logs the state of each step, so when things do go wrong, you can diagnose and debug problems quickly.

Amazon Storage Gateway

Amazon Storage Gateway is a service connecting an on-premises software appliance with cloud-based storage to provide seamless and secure integration between an organization’s on-premises IT environment and the Amazon Web Services in China storage infrastructure. The service enables you to securely store data to the Amazon Web Services in China cloud for scalable and cost-effective storage. Amazon Storage Gateway supports industry-standard storage protocols that work with your existing applications. It provides low-latency performance by maintaining frequently accessed data on-premises while securely storing all of your data encrypted in the Amazon Simple Storage Service (Amazon S3).

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Web Services Support

Amazon Web Services Support is a one-on-one, fast-response support channel that is staffed (24x7x365) with experienced technical support engineers and customer service professionals. The service helps customers at any level to use Amazon Web Services products and features successfully. For more information, see Amazon Web Services Support Plans.

Amazon Trusted Advisor helps you provision your resources by following best practices. Trusted Advisor inspects your Amazon environment and finds opportunities to save money, improve system performance and reliability, or help close security gaps. For more information, see Meet Amazon Trusted Advisor.

The Amazon Web Services Support API (available to Business and Enterprise-level Support customers) provides automated access to the functions of the Amazon Web Services Support Center.

Topics
Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Web Services Support is unique in the following way:

- API access to Amazon Trusted Advisor data via the Amazon Web Services Support API is not supported.
- The Amazon Web Services Support App is not supported.

Amazon Systems Manager

Amazon Systems Manager (formerly Amazon EC2 Systems Manager) is a unified interface that allows you to easily centralize operational data and automate tasks across your Amazon resources. Systems Manager shortens the time to detect and resolve operational problems in your infrastructure. Systems Manager gives you a complete view of your infrastructure performance and configuration, simplifies resource and application management, and makes it easy to operate and manage your infrastructure at scale.

Region Availability

Amazon Systems Manager is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Systems Manager is unique in the following ways.

General

Using Systems Manager to configure, access, and manage Amazon IoT Greengrass Version 2 devices is not supported.
Application Manager

Creating Amazon CloudFormation templates and stacks by using Application Manager is not currently supported.

Automation

The Automation `aws:copyImage` action is not supported.

Concurrently running automations in multiple Amazon Web Services Regions and accounts is not supported.

The following Automation actions for invoking APIs from other Amazon services are not supported:

- `aws:executeAwsApi`
- `aws:waitForAwsResourceProperty`
- `aws:assertAwsResourceProperty`

Change Manager

The Change Manager capability is not currently supported.

Explorer

Creating resource data syncs is not supported.

Incident Manager

The Incident Manager capability is not currently supported.

OpsCenter

The markdown support feature in the OpsItem description field in the console is not available.

Patch Manager

The **Patch now** feature in Patch Manager is not currently supported.

Patch policies (a Quick Setup configuration) are not currently supported.

Quick Setup

The Quick Setup capability is not currently supported.

Session Manager

To download the [Session Manager plugin](#) for Systems Manager, for use on your local machine, use the following URLs:

**Feature Availability and Implementation Differences**

The Amazon Web Services in China implementation of Amazon Trusted Advisor is unique in the following ways:

- The organizational view feature is not supported.
- Not all checks are supported in this Region. For a list of available checks, see the Trusted Advisor check reference.
- The Amazon Security Hub integration feature is not supported.
- Trusted Advisor Priority is not supported.
- Amazon CloudWatch alarms for Trusted Advisor metrics are not supported.
- Monitoring Trusted Advisor checks with Amazon CloudWatch Events or Amazon EventBridge is not supported.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

For more information about Amazon Trusted Advisor and the API operations available, see the Amazon Web Services Support documentation:

- Amazon Web Services Support User Guide
- Amazon Web Services Support API Reference

**General Information About Amazon Web Services in China**

The following information applies to all Amazon Web Services that are available in the China Regions.

Amazon Web Services Accounts in the China Regions
To use services in the Beijing and Ningxia Regions, you need an account and credentials specific to each of those Regions.

- Accounts and credentials for other Amazon Regions will not work for services operating in the Beijing and Ningxia Regions.
- Accounts and credentials for the Beijing and Ningxia Regions will not work for other Amazon Regions.
- For more information, see Signup, Accounts, and Credentials.

**Domain for Amazon Web Services in China**

The domain for Amazon Web Services in China is **www.amazonaws.cn**.

**Endpoints & Amazon Resource Names (ARNs)**

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

**Availability Zones for the China Regions**

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

**General Information for Amazon Web Services in China**

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- **Amazon Identity and Access Management (IAM)**
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.
- **EC2-Classic Platform**
  - The EC2-Classic platform is not supported.
- **Free Usage Tier**
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.
Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon Virtual Private Cloud

Amazon Virtual Private Cloud (Amazon VPC) lets you provision a logically isolated section of the Amazon Web Services in China cloud where you can launch Amazon Web Services in China resources in a virtual network that you define. You have complete control over your virtual networking environment, including selection of your own IP address range, creation of subnets, and configuration of route tables and network gateways.

Region Availability

Amazon Virtual Private Cloud is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon Virtual Private Cloud is unique in the following ways:
Getting Started with Amazon Web Services in China

- Amazon Site-to-Site VPN service is not available in the Beijing and Ningxia Regions.
- **IPv6** is supported. For more information about IPv6 support for Amazon S3 and other services, see [Getting Started with Amazon Web Services in China](#).
- You can't assign a private DNS name to a VPC endpoint service.
- You can only use VPC attachments and VPC peering attachments on a transit gateway.
- Transit Gateway Network Manager is not supported.
- Bring your own IP (BYOIP) and Bring your own ASN (BYOASN) are not available.
- Reachability Analyzer is not supported.
- Network Access Analyzer is not supported.

**Guides and References**

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

• In the Beijing Region, there are three Availability Zones.
• In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

• Amazon Identity and Access Management (IAM)
  • You can grant or deny a service access to resources using the Principal policy element.
  • Service principal values vary by Region.
• EC2-Classic Platform
  • The EC2-Classic platform is not supported.
• Free Usage Tier
  • The free usage tier is supported in the Ningxia Region.
  • The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console

The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.
Code Examples

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

Amazon WAF

Amazon WAF is a web application firewall that lets you monitor web requests that are forwarded to Amazon CloudFront distributions or an Application Load Balancer. You can also use Amazon WAF to block or allow requests based on conditions that you specify, such as the IP addresses that requests originate from or values in the requests.

Region Availability

Amazon WAF is available in the following regions in China:

- Beijing Region
- Ningxia Region

Feature Availability and Implementation Differences

The Amazon Web Services in China implementation of Amazon WAF is unique in the following ways:

- The following related services, which appear in the Amazon WAF documentation, are not available in the Beijing and Ningxia Regions: Amazon Firewall Manager, and Amazon Shield.
- Amazon Web Services Marketplace integration is not available in the Beijing and Ningxia Regions.
- Amazon WAF is supported at a regional level only in the Beijing and Ningxia Regions.
Getting Started with Amazon Web Services in China

• The Amazon WAF Bot Control managed rule group AWSManagedRulesBotControlRuleSet is available at the common protection level only. The targeted protection level rules are not available in the Beijing and Ningxia Regions.

Guides and References

Amazon Web Services in China user guides are available in HTML and PDF, in both Chinese and English. API references are available in HTML and PDF. Some API references may be available only in English. Currently, not all API references are available in the Beijing and Ningxia Regions. Links to some API references will take you to the global Amazon Web Services site. Note that some features and functionality described in the guides and references may not be available in the current Amazon Web Services in China release.

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.
Amazon WorkSpaces

Amazon WorkSpaces offers an easy way to provide a cloud-based virtual desktop to your end users. You can use Amazon WorkSpaces to provision either Windows or Linux desktops in just a few minutes and quickly scale to provide thousands of desktops to your users. Select from a choice of bundles that offer a range of different amounts of CPU, memory, storage, and a choice of applications. Users can connect from a Windows or Linux PC, Mac desktop computer, iPad, Kindle, or Android tablet.

Domain for Amazon Web Services in China

The domain for Amazon Web Services in China is www.amazonaws.cn.

Endpoints & Amazon Resource Names (ARNs)

For information about endpoints and ARNs in Amazon Web Services in China, see Endpoints and ARNs for Amazon Web Services in China.

Availability Zones for the China Regions

- In the Beijing Region, there are three Availability Zones.
- In the Ningxia Region, there are three Availability Zones.

General Information for Amazon Web Services in China

The following applies to all Amazon Web Services that are available in the China Regions. For detailed information about specific Amazon Web Services, see the service-specific topic in this guide.

- Amazon Identity and Access Management (IAM)
  - You can grant or deny a service access to resources using the Principal policy element.
  - Service principal values vary by Region.

- EC2-Classic Platform
  - The EC2-Classic platform is not supported.

- Free Usage Tier
  - The free usage tier is supported in the Ningxia Region.
  - The free usage tier is not supported in the Beijing Region.

Amazon Web Services Console
The console for Amazon Web Services in China is unique to China. The screenshots in the Amazon Web Services guides might differ from what you see on your console. For information about differences in service functionality, see the topics for each service in this guide.

**Code Examples**

The Amazon Web Services documentation might include endpoints and ARNs in code examples that are not specific to the Beijing and Ningxia Regions. When using examples, verify you are using the endpoints and ARNs for your Region.

**Services Unsupported in Amazon Web Services in China**

For a list of services that are supported and not supported in the China (Beijing) Region and the China (Ningxia) Region, see the [Region Table](#).
Endpoints and ARNs for Amazon Web Services in China

To access Amazon services and resources, you use endpoints and Amazon Resource Names (ARNs).

Endpoints

To connect programmatically to an Amazon Web Services in China, you use an endpoint. An endpoint is the URL of the entry point for an Amazon service. For example, dynamodb.cn-north-1.amazonaws.com.cn is the endpoint for the Amazon DynamoDB service in the Beijing Region, and dynamodb.cn-northwest-1.amazonaws.com.cn is the endpoint for Amazon DynamoDB in the Ningxia Region. The Amazon SDKs and the Amazon Command Line Interface (CLI) automatically use the default endpoint for each service in an Amazon Region. But you can specify another endpoint for your API requests.

For a complete list of endpoints in China Regions, see the following topics:

- Beijing Region Endpoints
- Ningxia Region Endpoints

For information about endpoints, see Amazon Service Endpoints in the Amazon Web Services General Reference.

Amazon Resource Names (ARNs)

Amazon Resource Names (ARNs) uniquely identify Amazon resources. You use an ARN to specify a resource across all of Amazon Web Services, such as in Amazon Identity and Access Management (IAM) policies, Amazon Relational Database Service (Amazon RDS) tags, and API calls.

For information about ARNs in the Beijing and Ningxia Regions, see ARNs for Amazon Web Services in China.

For general information about ARNs, see Amazon Resource Names (ARNs) in the Amazon Web Services General Reference.

Beijing Region Endpoints

- The endpoint domain for both the Beijing and Ningxia Regions is amazonaws.com.cn.
- For an endpoint in the Beijing Region, the Region value should be cn-north-1.

### Ningxia Region Endpoints

- The endpoint domain for both the Beijing and Ningxia Regions is `amazonaws.com.cn`.
- For an endpoint in the Ningxia Region, the Region value should be `cn-northwest-1`.

## ARNs for Amazon Web Services in China

In the Beijing and Ningxia Regions, the Amazon Resource Name (ARN) syntax includes a `cn`.

**arn:** `aws-cn`

If an ARN requires you to specify a region:

- For the Beijing Region, use `cn-north-1`.  

  Example for Amazon Relational Database Service:

  `arn:aws-cn:rds:cn-north-1:123456789012:db:mysql-db`

- For the Ningxia Region, use `cn-northwest-1`.  

  Example for Amazon Elastic Compute Cloud:
For additional information about ARNs, see Amazon Resource Names (ARNs) in the Amazon Web Services General Reference.
Amazon Developer Tools

Amazon Web Services in China can be accessed programmatically using the Amazon SDKs, the Amazon Command Line Interface (CLI), and other Amazon developer tools. The developer tools are designed to help you build and manage your Amazon Web Services in China applications.

⚠️ Important
Currently, the Amazon developer tools are available only in English.

Topics
- Amazon SDKs
- Amazon Command Line Tools
- IDE Toolkits

Amazon SDKs

The Amazon SDKs make it easy to work with Amazon APIs in your preferred programming language or platform. The SDKs include sample code, libraries, documentation, templates, sample applications, and other developer tools related to your technology of choice.

To download the Amazon SDKs, go to Tools for Amazon Web Services.

Amazon Command Line Tools

Amazon Web Services offers the Amazon Command Line Interface (CLI), a single tool for controlling and managing multiple Amazon services. For those who script in the Windows PowerShell environment, Amazon Web Services also offers the Amazon Tools for Windows PowerShell.

To download the Amazon CLI or the PowerShell tools, go to Tools for Amazon Web Services.

Before the introduction of the Amazon CLI, service-specific CLIs were available. Some of the prior, service-specific CLIs are available in the China Regions. If a service-specific CLI is available, it can be downloaded from the appropriate service page. The service pages can be found at Documentation by Service.
IDE Toolkits

Amazon Toolkits are extensions that integrate Amazon Cloud services, resources, and features with a variety of developer environments. These environments include Visual Studio, VS Code, and Azure DevOps. There are also Toolkit extensions available for the JetBrains suite of integrated development environments, including Rider, PyCharm, and DataGrip. You can use these integrations to manage your Amazon Cloud resources and features for Amazon S3, Amazon ECS, Amazon CloudFormation, Amazon Lambda, and Amazon App Runner services—without having to leave your development environment. You can install most toolkit extensions from an IDE’s built-in extension browser, reducing the time and attention required for setup. With an intuitive GUI layout, unique features designed to address each IDE’s capabilities, and regular releases of new features—Toolkits minimize interruptions to your workflow and maximize the efficiency of your favorite IDEs.
Amazon Web Services in China Support and Other Resources

Amazon Web Services in China offers a variety of support options, including one-on-one troubleshooting, Amazon Trusted Advisor, a discussion forum, and the Service Health Dashboard.

<table>
<thead>
<tr>
<th>Support Service</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Amazon Web Services Support</strong></td>
<td>Amazon Web Services Support is a one-on-one, fast-response support channel that is staffed around the clock by experienced technical support engineers. The service helps customers of all sizes and technical abilities to successfully use the products and features provided by Amazon Web Services in China.</td>
</tr>
<tr>
<td><strong>Amazon Trusted Advisor</strong></td>
<td>Amazon Trusted Advisor helps you provision your resources by following best practices. Trusted Advisor inspects your Amazon environment and finds opportunities to save money, improve system performance and reliability, or help close security gaps.</td>
</tr>
<tr>
<td><strong>Service Health Dashboard</strong></td>
<td>Amazon Web Services in China features a Service Health Dashboard (SHD) that provides access to current status and historical data about every Amazon Web Services in China product. If there's a problem with a service, you'll be able to expand the appropriate line in the Details section and learn more. You can also subscribe to the RSS feed for any service. You can access the SHD at <a href="http://status.amazonaws.cn/">http://status.amazonaws.cn/</a>. The SHD is available in both Chinese and English.</td>
</tr>
</tbody>
</table>

Amazon Web Services Support API

The Amazon Web Services Support API provides access to some of the services that underlie the features of the Amazon Web Services Support Center.

In the Beijing Region, you can use the following endpoint to access the Amazon Web Services Support API:
In the Ningxia Region, you can use the following endpoint to access the Amazon Web Services Support API:

- https://support.cn-north-1.amazonaws.com.cn
- https://support.cn-northwest-1.amazonaws.com.cn

For more information, see Amazon Web Services Support.
