Welcome

The Amazon Health API provides access to the Amazon Health information that appears in the [Amazon Health Dashboard](#). You can use the API operations to get information about events that might affect your Amazon Web Services services and resources.

You must have a Business, Enterprise On-Ramp, or Enterprise Support plan from [Amazon Web Services Support](#) to use the Amazon Health API. If you call the Amazon Health API from an Amazon Web Services account that doesn't have a Business, Enterprise On-Ramp, or Enterprise Support plan, you receive a `SubscriptionRequiredException` error.

For API access, you need an access key ID and a secret access key. Use temporary credentials instead of long-term access keys when possible. Temporary credentials include an access key ID, a secret access key, and a security token that indicates when the credentials expire. For more information, see [Best practices for managing Amazon access keys](#) in the *Amazon Web Services General Reference*.

You can use the Amazon Health endpoint `health.us-east-1.amazonaws.com` (HTTPS) to call the Amazon Health API operations. Amazon Health supports a multi-Region application architecture and has two regional endpoints in an active-passive configuration. You can use the high availability endpoint example to determine which Amazon Web Services Region is active, so that you can get the latest information from the API. For more information, see [Accessing the Amazon Health API](#) in the *Amazon Health User Guide*.

For authentication of requests, Amazon Health uses the [Signature Version 4 Signing Process](#).

If your Amazon Web Services account is part of Amazon Organizations, you can use the Amazon Health organizational view feature. This feature provides a centralized view of Amazon Health events across all accounts in your organization. You can aggregate Amazon Health events in real time to identify accounts in your organization that are affected by an operational event or get notified of security vulnerabilities. Use the organizational view API operations to enable this feature and return event information. For more information, see [Aggregating Amazon Health events](#) in the *Amazon Health User Guide*.

Note

When you use the Amazon Health API operations to return Amazon Health events, see the following recommendations:

- Use the [eventScopeCode](#) parameter to specify whether to return Amazon Health events that are public or account-specific.
- Use pagination to view all events from the response. For example, if you call the `DescribeEventsForOrganization` operation to get all events in your organization, you might receive several page results. Specify the `nextToken` in the next request to return more results.

This document was last published on April 30, 2025.

Actions

The following actions are supported:

- [DescribeAffectedAccountsForOrganization](#)
- [DescribeAffectedEntities](#)
- [DescribeAffectedEntitiesForOrganization](#)
- [DescribeEntityAggregates](#)
- [DescribeEntityAggregatesForOrganization](#)
- [DescribeEventAggregates](#)
- [DescribeEventDetails](#)
- [DescribeEventDetailsForOrganization](#)
- [DescribeEvents](#)
- [DescribeEventsForOrganization](#)
- [DescribeEventTypes](#)
- [DescribeHealthServiceStatusForOrganization](#)
- [DisableHealthServiceAccessForOrganization](#)
- [EnableHealthServiceAccessForOrganization](#)

DescribeAffectedAccountsForOrganization

Returns a list of accounts in the organization from Amazon Organizations that are affected by the provided event. For more information about the different types of Amazon Health events, see [Event](#).

Before you can call this operation, you must first enable Amazon Health to work with Amazon Organizations. To do this, call the [EnableHealthServiceAccessForOrganization](#) operation from your organization's management account.

Note

This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.

Request Syntax

```
{
  "eventArn": "string",
  "maxResults": number,
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 10. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "affectedAccounts": [ "string" ],
  "eventScopeCode": "string",
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

affectedAccounts

A JSON set of elements of the affected accounts.

Type: Array of strings

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

eventScopeCode

This parameter specifies if the Amazon Health event is a public Amazon Web Services service event or an account-specific event.

- If the `eventScopeCode` value is `PUBLIC`, then the `affectedAccounts` value is always empty.
- If the `eventScopeCode` value is `ACCOUNT_SPECIFIC`, then the `affectedAccounts` value lists the affected Amazon Web Services accounts in your organization. For example, if an event affects a service such as Amazon Elastic Compute Cloud and you have Amazon Web Services accounts that use that service, those account IDs appear in the response.
- If the `eventScopeCode` value is `NONE`, then the `eventArn` that you specified in the request is invalid or doesn't exist.

Type: String

Valid Values: `PUBLIC` | `ACCOUNT_SPECIFIC` | `NONE`

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (nextToken) is not valid.

HTTP Status Code: 400

See Also

- [Amazon SDK for Ruby V3](#)

DescribeAffectedEntities

Returns a list of entities that have been affected by the specified events, based on the specified filter criteria. Entities can refer to individual customer resources, groups of customer resources, or any other construct, depending on the Amazon Web Services service. Events that have impact beyond that of the affected entities, or where the extent of impact is unknown, include at least one entity indicating this.

At least one event ARN is required.

Note

- This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.
- This operation supports resource-level permissions. You can use this operation to allow or deny access to specific Amazon Health events. For more information, see [Resource- and action-based conditions](#) in the *Amazon Health User Guide*.

Request Syntax

```
{
  "filter": {
    "entityArns": [ "string" ],
    "entityValues": [ "string" ],
    "eventArns": [ "string" ],
    "lastUpdatedTimes": [
      {
        "from": number,
        "to": number
      }
    ],
    "statusCodes": [ "string" ],
    "tags": [
      {
        "string" : "string"
      }
    ]
  },
  "locale": "string",
```

```
"maxResults": number,  
"nextToken": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

filter

Values to narrow the results returned. At least one event ARN is required.

Type: [EntityFilter](#) object

Required: Yes

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: . {2, 256}

Required: No

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue

the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "entities": [
    {
      "awsAccountId": "string",
      "entityArn": "string",
      "entityMetadata": {
        "string": "string"
      },
      "entityUrl": "string",
      "entityValue": "string",
      "eventArn": "string",
      "lastUpdatedTime": number,
      "statusCode": "string",
      "tags": {
        "string": "string"
      }
    }
  ],
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entities

The entities that match the filter criteria.

Type: Array of [AffectedEntity](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a nextToken pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (nextToken) is not valid.

HTTP Status Code: 400

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

DescribeAffectedEntitiesForOrganization

Returns a list of entities that have been affected by one or more events for one or more accounts in your organization in Amazon Organizations, based on the filter criteria. Entities can refer to individual customer resources, groups of customer resources, or any other construct, depending on the Amazon Web Services service.

At least one event Amazon Resource Name (ARN) and account ID are required.

Before you can call this operation, you must first enable Amazon Health to work with Amazon Organizations. To do this, call the [EnableHealthServiceAccessForOrganization](#) operation from your organization's management account.

Note

- This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.
- This operation doesn't support resource-level permissions. You can't use this operation to allow or deny access to specific Amazon Health events. For more information, see [Resource- and action-based conditions](#) in the *Amazon Health User Guide*.

Request Syntax

```
{
  "locale": "string",
  "maxResults": number,
  "nextToken": "string",
  "organizationEntityAccountFilters": [
    {
      "awsAccountId": "string",
      "eventArn": "string",
      "statusCodes": [ "string" ]
    }
  ],
  "organizationEntityFilters": [
    {
      "awsAccountId": "string",
      "eventArn": "string"
    }
  ]
}
```

```
    }  
  ]  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: .{2,256}

Required: No

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

organizationEntityAccountFilters

A JSON set of elements including the `awsAccountId`, `eventArn` and a set of `statusCodes`.

Type: Array of [EntityAccountFilter](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

organizationEntityFilters

This parameter has been deprecated.

A JSON set of elements including the `awsAccountId` and the `eventArn`.

Type: Array of [EventAccountFilter](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

Response Syntax

```
{
  "entities": [
    {
      "awsAccountId": "string",
      "entityArn": "string",
      "entityMetadata": {
        "string" : "string"
      },
      "entityUrl": "string",
      "entityValue": "string",
      "eventArn": "string",
      "lastUpdatedTime": number,
      "statusCode": "string",
      "tags": {
        "string" : "string"
      }
    }
  ]
}
```

```
    }
  ],
  "failedSet": [
    {
      "awsAccountId": "string",
      "errorMessage": "string",
      "errorName": "string",
      "eventArn": "string"
    }
  ],
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entities

A JSON set of elements including the `awsAccountId` and its `entityArn`, `entityValue` and its `entityArn`, `lastUpdatedTime`, and `statusCode`.

Type: Array of [AffectedEntity](#) objects

failedSet

A JSON set of elements of the failed response, including the `awsAccountId`, `errorMessage`, `errorName`, and `eventArn`.

Type: Array of [OrganizationAffectedEntitiesErrorItem](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: [a-zA-Z0-9=/_.-]{4,10000}

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (nextToken) is not valid.

HTTP Status Code: 400

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

See Also

DescribeEntityAggregates

Returns the number of entities that are affected by each of the specified events.

Request Syntax

```
{  
  "eventArns": [ "string" ]  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

eventArns

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

Response Syntax

```
{  
  "entityAggregates": [  
    {  
      "count": number,  
      "eventArn": "string",  
    }  
  ]  
}
```

```
    "statuses": {  
      "string" : number  
    }  
  }  
]  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

entityAggregates

The number of entities that are affected by each of the specified events.

Type: Array of [EntityAggregate](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for JavaScript V3](#)
- [Amazon SDK for Kotlin](#)
- [Amazon SDK for PHP V3](#)
- [Amazon SDK for Python](#)
- [Amazon SDK for Ruby V3](#)

DescribeEntityAggregatesForOrganization

Returns a list of entity aggregates for your Amazon Organizations that are affected by each of the specified events.

Request Syntax

```
{
  "awsAccountIds": [ "string" ],
  "eventArns": [ "string" ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

[awsAccountIds](#)

A list of 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Length Constraints: Maximum length of 12.

Pattern: $^\backslash S + \$$

Required: No

[eventArns](#)

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

Response Syntax

```
{
  "organizationEntityAggregates": [
    {
      "accounts": [
        {
          "accountId": "string",
          "count": number,
          "statuses": {
            "string" : number
          }
        }
      ],
      "count": number,
      "eventArn": "string",
      "statuses": {
        "string" : number
      }
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[organizationEntityAggregates](#)

The list of entity aggregates for each of the specified accounts that are affected by each of the specified events.

Type: Array of [OrganizationEntityAggregate](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for JavaScript V3](#)
- [Amazon SDK for Kotlin](#)
- [Amazon SDK for PHP V3](#)
- [Amazon SDK for Python](#)
- [Amazon SDK for Ruby V3](#)

DescribeEventAggregates

Returns the number of events of each event type (issue, scheduled change, and account notification). If no filter is specified, the counts of all events in each category are returned.

Note

This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.

Request Syntax

```
{
  "aggregateField": "string",
  "filter": {
    "availabilityZones": [ "string" ],
    "endTimes": [
      {
        "from": number,
        "to": number
      }
    ],
    "entityArns": [ "string" ],
    "entityValues": [ "string" ],
    "eventArns": [ "string" ],
    "eventStatusCodes": [ "string" ],
    "eventTypeCategories": [ "string" ],
    "eventTypeCodes": [ "string" ],
    "lastUpdatedTimes": [
      {
        "from": number,
        "to": number
      }
    ],
    "regions": [ "string" ],
    "services": [ "string" ],
    "startTimes": [
      {
        "from": number,
        "to": number
      }
    ]
  }
}
```

```
    ],
    "tags": [
      {
        "string" : "string"
      }
    ]
  },
  "maxResults": number,
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

[aggregateField](#)

The only currently supported value is `eventTypeCategory`.

Type: String

Valid Values: `eventTypeCategory`

Required: Yes

[filter](#)

Values to narrow the results returned.

Type: [EventFilter](#) object

Required: No

[maxResults](#)

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 10. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "eventAggregates": [
    {
      "aggregateValue": "string",
      "count": number
    }
  ],
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

eventAggregates

The number of events in each category that meet the optional filter criteria.

Type: Array of [EventAggregate](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue

the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (nextToken) is not valid.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)
- [Amazon SDK for Java V2](#)

- [Amazon SDK for Python](#)
- [Amazon SDK for Ruby V3](#)

DescribeEventDetails

Returns detailed information about one or more specified events. Information includes standard event data (Amazon Web Services Region, service, and so on, as returned by [DescribeEvents](#)), a detailed event description, and possible additional metadata that depends upon the nature of the event. Affected entities are not included. To retrieve the entities, use the [DescribeAffectedEntities](#) operation.

If a specified event can't be retrieved, an error message is returned for that event.

Note

This operation supports resource-level permissions. You can use this operation to allow or deny access to specific Amazon Health events. For more information, see [Resource- and action-based conditions](#) in the *Amazon Health User Guide*.

Request Syntax

```
{
  "eventArns": [ "string" ],
  "locale": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

eventArns

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: `.{2,256}`

Required: No

Response Syntax

```
{
  "failedSet": [
    {
      "errorMessage": "string",
      "errorName": "string",
      "eventArn": "string"
    }
  ],
  "successfulSet": [
    {
      "event": {
        "arn": "string",
        "availabilityZone": "string",
        "endTime": number,
        "eventScopeCode": "string",
        "eventTypeCategory": "string",
        "eventTypeCode": "string",
        "lastUpdatedTime": number,
        "region": "string",
        "service": "string",
        "startTime": number,
        "statusCode": "string"
      }
    }
  ],
}
```

```
    "eventDescription": {
      "latestDescription": "string"
    },
    "eventMetadata": {
      "string" : "string"
    }
  }
]
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedSet

Error messages for any events that could not be retrieved.

Type: Array of [EventDetailsErrorItem](#) objects

successfulSet

Information about the events that could be retrieved.

Type: Array of [EventDetails](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

See Also

DescribeEventDetailsForOrganization

Returns detailed information about one or more specified events for one or more Amazon Web Services accounts in your organization. This information includes standard event data (such as the Amazon Web Services Region and service), an event description, and (depending on the event) possible metadata. This operation doesn't return affected entities, such as the resources related to the event. To return affected entities, use the [DescribeAffectedEntitiesForOrganization](#) operation.

Note

Before you can call this operation, you must first enable Amazon Health to work with Amazon Organizations. To do this, call the [EnableHealthServiceAccessForOrganization](#) operation from your organization's management account.

When you call the `DescribeEventDetailsForOrganization` operation, specify the `organizationEventDetailFilters` object in the request. Depending on the Amazon Health event type, note the following differences:

- To return event details for a public event, you must specify a null value for the `awsAccountId` parameter. If you specify an account ID for a public event, Amazon Health returns an error message because public events aren't specific to an account.
- To return event details for an event that is specific to an account in your organization, you must specify the `awsAccountId` parameter in the request. If you don't specify an account ID, Amazon Health returns an error message because the event is specific to an account in your organization.

For more information, see [Event](#).

Note

This operation doesn't support resource-level permissions. You can't use this operation to allow or deny access to specific Amazon Health events. For more information, see [Resource- and action-based conditions](#) in the *Amazon Health User Guide*.

Request Syntax

```
{
  "locale": "string",
  "organizationEventDetailFilters": [
    {
      "awsAccountId": "string",
      "eventArn": "string"
    }
  ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: . {2,256}

Required: No

organizationEventDetailFilters

A set of JSON elements that includes the awsAccountId and the eventArn.

Type: Array of [EventAccountFilter](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Response Syntax

```
{
  "failedSet": [
    {
      "awsAccountId": "string",
      "errorMessage": "string",
      "errorName": "string",
      "eventArn": "string"
    }
  ],
  "successfulSet": [
    {
      "awsAccountId": "string",
      "event": {
        "arn": "string",
        "availabilityZone": "string",
        "endTime": number,
        "eventScopeCode": "string",
        "eventTypeCategory": "string",
        "eventTypeCode": "string",
        "lastUpdatedTime": number,
        "region": "string",
        "service": "string",
        "startTime": number,
        "statusCode": "string"
      },
      "eventDescription": {
        "latestDescription": "string"
      },
      "eventMetadata": {
        "string" : "string"
      }
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedSet

Error messages for any events that could not be retrieved.

Type: Array of [OrganizationEventDetailsErrorItem](#) objects

successfulSet

Information about the events that could be retrieved.

Type: Array of [OrganizationEventDetails](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

See Also

- [Amazon SDK for Ruby V3](#)

DescribeEvents

Returns information about events that meet the specified filter criteria. Events are returned in a summary form and do not include the detailed description, any additional metadata that depends on the event type, or any affected resources. To retrieve that information, use the [DescribeEventDetails](#) and [DescribeAffectedEntities](#) operations.

If no filter criteria are specified, all events are returned. Results are sorted by `lastModifiedTime`, starting with the most recent event.

Note

- When you call the `DescribeEvents` operation and specify an entity for the `entityValues` parameter, Amazon Health might return public events that aren't specific to that resource. For example, if you call `DescribeEvents` and specify an ID for an Amazon Elastic Compute Cloud (Amazon EC2) instance, Amazon Health might return events that aren't specific to that resource or service. To get events that are specific to a service, use the `services` parameter in the `filter` object. For more information, see [Event](#).
- This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.

Request Syntax

```
{
  "filter": {
    "availabilityZones": [ "string" ],
    "endTimes": [
      {
        "from": number,
        "to": number
      }
    ],
    "entityArns": [ "string" ],
    "entityValues": [ "string" ],
    "eventArns": [ "string" ],
    "eventStatusCodes": [ "string" ],
    "eventTypeCategories": [ "string" ],
```

```
"eventTypeCodes": [ "string" ],
"lastUpdatedTimes": [
  {
    "from": number,
    "to": number
  }
],
"regions": [ "string" ],
"services": [ "string" ],
"startTimes": [
  {
    "from": number,
    "to": number
  }
],
"tags": [
  {
    "string" : "string"
  }
]
},
"locale": "string",
"maxResults": number,
"nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

filter

Values to narrow the results returned.

Type: [EventFilter](#) object

Required: No

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: `.{2,256}`

Required: No

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "events": [
    {
      "arn": "string",
      "availabilityZone": "string",
      "endTime": number,
      "eventScopeCode": "string",
      "eventTypeCategory": "string",
      "eventTypeCode": "string",
```

```
    "lastUpdatedTime": number,
    "region": "string",
    "service": "string",
    "startTime": number,
    "statusCode": "string"
  }
],
"nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

events

The events that match the specified filter criteria.

Type: Array of [Event](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_+_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (`nextToken`) is not valid.

HTTP Status Code: 400

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

- [Amazon SDK for Ruby V3](#)

DescribeEventsForOrganization

Returns information about events across your organization in Amazon Organizations. You can use the `filters` parameter to specify the events that you want to return. Events are returned in a summary form and don't include the affected accounts, detailed description, any additional metadata that depends on the event type, or any affected resources. To retrieve that information, use the following operations:

- [DescribeAffectedAccountsForOrganization](#)
- [DescribeEventDetailsForOrganization](#)
- [DescribeAffectedEntitiesForOrganization](#)

If you don't specify a `filter`, the `DescribeEventsForOrganizations` returns all events across your organization. Results are sorted by `lastModifiedTime`, starting with the most recent event.

For more information about the different types of Amazon Health events, see [Event](#).

Before you can call this operation, you must first enable Amazon Health to work with Amazon Organizations. To do this, call the [EnableHealthServiceAccessForOrganization](#) operation from your organization's management account.

Note

This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.

Request Syntax

```
{
  "filter": {
    "awsAccountIds": [ "string" ],
    "endTime": {
      "from": number,
      "to": number
    },
  },
  "entityArns": [ "string" ],
  "entityValues": [ "string" ],
  "eventStatusCodes": [ "string" ],
}
```

```
"eventTypeCategories": [ "string" ],
"eventTypeCodes": [ "string" ],
"lastUpdatedTime": {
  "from": number,
  "to": number
},
"regions": [ "string" ],
"services": [ "string" ],
"startTime": {
  "from": number,
  "to": number
}
},
"locale": "string",
"maxResults": number,
"nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

filter

Values to narrow the results returned.

Type: [OrganizationEventFilter](#) object

Required: No

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: . {2, 256}

Required: No

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a nextToken pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "events": [
    {
      "arn": "string",
      "endTime": number,
      "eventScopeCode": "string",
      "eventTypeCategory": "string",
      "eventTypeCode": "string",
      "lastUpdatedTime": number,
      "region": "string",
      "service": "string",
      "startTime": number,
      "statusCode": "string"
    }
  ],
  "nextToken": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

events

The events that match the specified filter criteria.

Type: Array of [OrganizationEvent](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_+_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (`nextToken`) is not valid.

HTTP Status Code: 400

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

See Also

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for JavaScript V3](#)
- [Amazon SDK for Kotlin](#)
- [Amazon SDK for PHP V3](#)
- [Amazon SDK for Python](#)
- [Amazon SDK for Ruby V3](#)

DescribeEventTypes

Returns the event types that meet the specified filter criteria. You can use this API operation to find information about the Amazon Health event, such as the category, Amazon Web Services service, and event code. The metadata for each event appears in the [EventType](#) object.

If you don't specify a filter criteria, the API operation returns all event types, in no particular order.

Note

This API operation uses pagination. Specify the `nextToken` parameter in the next request to return more results.

Request Syntax

```
{
  "filter": {
    "eventTypeCategories": [ "string" ],
    "eventTypeCodes": [ "string" ],
    "services": [ "string" ]
  },
  "locale": "string",
  "maxResults": number,
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

filter

Values to narrow the results returned.

Type: [EventTypeFilter](#) object

Required: No

locale

The locale (language) to return information in. English (en) is the default and the only supported value at this time.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 256.

Pattern: `.{2,256}`

Required: No

maxResults

The maximum number of items to return in one batch, between 10 and 100, inclusive.

Note

If you don't specify the `maxResults` parameter, this operation returns a maximum of 30 items by default.

Type: Integer

Valid Range: Minimum value of 10. Maximum value of 100.

Required: No

nextToken

If the results of a search are large, only a portion of the results are returned, and a `nextToken` pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Required: No

Response Syntax

```
{
  "eventTypes": [
    {
      "category": "string",
      "code": "string",
      "service": "string"
    }
  ],
  "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

eventTypes

A list of event types that match the filter criteria. Event types have a category (issue, accountNotification, or scheduledChange), a service (for example, EC2, RDS, DATAPIPELINE, BILLING), and a code (in the format `AWS_SERVICE_DESCRIPTION` ; for example, `AWS_EC2_SYSTEM_MAINTENANCE_EVENT`).

Type: Array of [EventType](#) objects

nextToken

If the results of a search are large, only a portion of the results are returned, and a nextToken pagination token is returned in the response. To retrieve the next batch of results, reissue the search request and include the returned token. When all results have been returned, the response does not contain a pagination token value.

Type: String

Length Constraints: Minimum length of 4. Maximum length of 10000.

Pattern: `[a-zA-Z0-9=/_.-]{4,10000}`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

InvalidPaginationToken

The specified pagination token (nextToken) is not valid.

HTTP Status Code: 400

UnsupportedLocale

The specified locale is not supported.

HTTP Status Code: 400

See Also

DescribeHealthServiceStatusForOrganization

This operation provides status information on enabling or disabling Amazon Health to work with your organization. To call this operation, you must use the organization's management account.

Response Syntax

```
{
  "healthServiceAccessStatusForOrganization": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[healthServiceAccessStatusForOrganization](#)

Information about the status of enabling or disabling the Amazon Health organizational view feature in your organization.

Valid values are ENABLED | DISABLED | PENDING.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)

- [Amazon SDK for Java V2](#)
- [Amazon SDK for JavaScript V3](#)
- [Amazon SDK for Kotlin](#)
- [Amazon SDK for PHP V3](#)
- [Amazon SDK for Python](#)
- [Amazon SDK for Ruby V3](#)

DisableHealthServiceAccessForOrganization

Disables Amazon Health from working with Amazon Organizations. To call this operation, you must sign in to the organization's management account. For more information, see [Aggregating Amazon Health events](#) in the *Amazon Health User Guide*.

This operation doesn't remove the service-linked role from the management account in your organization. You must use the IAM console, API, or Amazon Command Line Interface (Amazon CLI) to remove the service-linked role. For more information, see [Deleting a Service-Linked Role](#) in the *IAM User Guide*.

Note

You can also disable the organizational feature by using the Organizations [DisableAWSServiceAccess](#) API operation. After you call this operation, Amazon Health stops aggregating events for all other Amazon Web Services accounts in your organization. If you call the Amazon Health API operations for organizational view, Amazon Health returns an error. Amazon Health continues to aggregate health events for your Amazon Web Services account.

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

ConcurrentModificationException

[EnableHealthServiceAccessForOrganization](#) is already in progress. Wait for the action to complete before trying again. To get the current status, use the [DescribeHealthServiceStatusForOrganization](#) operation.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon Command Line Interface](#)
- [Amazon SDK for .NET](#)
- [Amazon SDK for C++](#)
- [Amazon SDK for Go v2](#)
- [Amazon SDK for Java V2](#)

- [Amazon SDK for Ruby V3](#)

EnableHealthServiceAccessForOrganization

Enables Amazon Health to work with Amazon Organizations. You can use the organizational view feature to aggregate events from all Amazon Web Services accounts in your organization in a centralized location.

This operation also creates a service-linked role for the management account in the organization.

Note

To call this operation, you must meet the following requirements:

- You must have a Business, Enterprise On-Ramp, or Enterprise Support plan from [Amazon Web Services Support](#) to use the Amazon Health API. If you call the Amazon Health API from an Amazon Web Services account that doesn't have a Business, Enterprise On-Ramp, or Enterprise Support plan, you receive a `SubscriptionRequiredException` error.
- You must have permission to call this operation from the organization's management account. For example IAM policies, see [Amazon Health identity-based policy examples](#).

If you don't have the required support plan, you can instead use the Amazon Health console to enable the organizational view feature. For more information, see [Aggregating Amazon Health events](#) in the *Amazon Health User Guide*.

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

ConcurrentModificationException

[EnableHealthServiceAccessForOrganization](#) is already in progress. Wait for the action to complete before trying again. To get the current status, use the [DescribeHealthServiceStatusForOrganization](#) operation.

HTTP Status Code: 400

Data Types

The Amazon Health API contains several data types that various actions use. This section describes each data type in detail.

Note

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- [AccountEntityAggregate](#)
- [AffectedEntity](#)
- [DateTimeRange](#)
- [EntityAccountFilter](#)
- [EntityAggregate](#)
- [EntityFilter](#)
- [Event](#)
- [EventAccountFilter](#)
- [EventAggregate](#)
- [EventDescription](#)
- [EventDetails](#)
- [EventDetailsErrorItem](#)
- [EventFilter](#)
- [EventType](#)
- [EventTypeFilter](#)
- [OrganizationAffectedEntitiesErrorItem](#)
- [OrganizationEntityAggregate](#)
- [OrganizationEvent](#)
- [OrganizationEventDetails](#)
- [OrganizationEventDetailsErrorItem](#)

- [OrganizationEventFilter](#)

AccountEntityAggregate

The number of entities in an account that are impacted by a specific event aggregated by the entity status codes.

Contents

accountId

The 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?):health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

count

The number of entities that match the filter criteria for the specified events.

Type: Integer

Required: No

statuses

The number of affected entities aggregated by the entity status codes.

Type: String to integer map

Valid Keys: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)

- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

AffectedEntity

Information about an entity that is affected by a Health event.

Contents

awsAccountId

The 12-digit Amazon Web Services account number that contains the affected entity.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

entityArn

The unique identifier for the entity. Format: `arn:aws:health:entity-region:aws-account:entity/entity-id` . Example: `arn:aws:health:us-east-1:111222333444:entity/AVh5GGT7u11arKr1sE1K`

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `.{0,1600}`

Required: No

entityMetadata

Additional metadata about the affected entity.

Type: String to string map

Key Length Constraints: Maximum length of 1024.

Value Length Constraints: Maximum length of 1024.

Required: No

entityUrl

The URL of the affected entity.

Type: String

Required: No

entityValue

The ID of the affected entity.

Type: String

Length Constraints: Maximum length of 1024.

Pattern: `.{0,1024}`

Required: No

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

lastUpdatedTime

The most recent time that the entity was updated.

Type: Timestamp

Required: No

statusCode

The most recent status of the entity affected by the event. The possible values are IMPAIRED, UNIMPAIRED, UNKNOWN, PENDING, and RESOLVED.

Type: String

Valid Values: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

tags

A map of entity tags attached to the affected entity.

Note

Currently, the tags property isn't supported.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Maximum length of 127.

Key Pattern: `.{0,127}`

Value Length Constraints: Maximum length of 255.

Value Pattern: `.{0,255}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)

- [Amazon SDK for Ruby V3](#)

DateTimeRange

A range of dates and times that is used by the [EventFilter](#) and [EntityFilter](#) objects. If `from` is set and `to` is set: match items where the timestamp (`startTime`, `endTime`, or `lastUpdatedTime`) is between `from` and `to` inclusive. If `from` is set and `to` is not set: match items where the timestamp value is equal to or after `from`. If `from` is not set and `to` is set: match items where the timestamp value is equal to or before `to`.

Contents

from

The starting date and time of a time range.

Type: Timestamp

Required: No

to

The ending date and time of a time range.

Type: Timestamp

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EntityAccountFilter

A JSON set of elements including the `awsAccountId`, `eventArn` and a set of `statusCodes`.

Contents

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

awsAccountId

The 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

statusCodes

A list of entity status codes.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Valid Values: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EntityAggregate

The number of entities that are affected by one or more events. Returned by the [DescribeEntityAggregates](#) operation.

Contents

count

The number of entities that match the criteria for the specified events.

Type: Integer

Required: No

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/  
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

statuses

The number of affected entities aggregated by the entity status codes.

Type: String to integer map

Valid Keys: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EntityFilter

The values to use to filter results from the [DescribeAffectedEntities](#) operation.

Contents

eventArns

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

entityArns

A list of entity ARNs (unique identifiers).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1600.

Pattern: `.{0,1600}`

Required: No

entityValues

A list of IDs for affected entities.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1024.

Pattern: `. {0,1024}`

Required: No

lastUpdatedTimes

A list of the most recent dates and times that the entity was updated.

Type: Array of [DateTimeRange](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

statusCodes

A list of entity status codes (IMPAIRED, UNIMPAIRED, or UNKNOWN).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Valid Values: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

tags

A map of entity tags attached to the affected entity.

Note

Currently, the tags property isn't supported.

Type: Array of string to string maps

Array Members: Maximum number of 50 items.

Map Entries: Maximum number of 50 items.

Key Length Constraints: Maximum length of 127.

Key Pattern: `.{0,127}`

Value Length Constraints: Maximum length of 255.

Value Pattern: `.{0,255}`

Required: No

See Also

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

Event

Summary information about an Amazon Health event.

Amazon Health events can be public or account-specific:

- *Public events* might be service events that are not specific to an Amazon Web Services account. For example, if there is an issue with an Amazon Web Services Region, Amazon Health provides information about the event, even if you don't use services or resources in that Region.
- *Account-specific* events are specific to either your Amazon Web Services account or an account in your organization. For example, if there's an issue with Amazon Elastic Compute Cloud in a Region that you use, Amazon Health provides information about the event and the affected resources in the account.

You can determine if an event is public or account-specific by using the `eventScopeCode` parameter. For more information, see [eventScopeCode](#).

Contents

arn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

availabilityZone

The Amazon Availability Zone of the event. For example, `us-east-1a`.

Type: String

Length Constraints: Minimum length of 6. Maximum length of 18.

Pattern: `[a-z]{2}\-[0-9a-z\-\-]{4,16}`

Required: No

endTime

The date and time that the event ended.

Type: Timestamp

Required: No

eventScopeCode

This parameter specifies if the Amazon Health event is a public Amazon Web Services service event or an account-specific event.

- If the `eventScopeCode` value is `PUBLIC`, then the `affectedAccounts` value is always empty.
- If the `eventScopeCode` value is `ACCOUNT_SPECIFIC`, then the `affectedAccounts` value lists the affected Amazon Web Services accounts in your organization. For example, if an event affects a service such as Amazon Elastic Compute Cloud and you have Amazon Web Services accounts that use that service, those account IDs appear in the response.
- If the `eventScopeCode` value is `NONE`, then the `eventArn` that you specified in the request is invalid or doesn't exist.

Type: String

Valid Values: `PUBLIC` | `ACCOUNT_SPECIFIC` | `NONE`

Required: No

eventTypeCategory

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

eventTypeCode

The unique identifier for the event type. The format is `AWS_SERVICE_DESCRIPTION` ; for example, `AWS_EC2_SYSTEM_MAINTENANCE_EVENT`.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[a-zA-Z0-9_\-]{3,100}`

Required: No

lastUpdatedTime

The most recent date and time that the event was updated.

Type: Timestamp

Required: No

region

The Amazon Web Services Region name of the event.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 25.

Pattern: `[^:/]{2,25}`

Required: No

service

The Amazon Web Services service that is affected by the event. For example, EC2, RDS.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[^:/]{2,30}`

Required: No

startTime

The date and time that the event began.

Type: Timestamp

Required: No

statusCode

The most recent status of the event. Possible values are `open`, `closed`, and `upcoming`.

Type: String

Valid Values: `open` | `closed` | `upcoming`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventAccountFilter

The values used to filter results from the [DescribeEventDetailsForOrganization](#) and [DescribeAffectedEntitiesForOrganization](#) operations.

Contents

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: Yes

awsAccountId

The 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventAggregate

The number of events of each issue type. Returned by the [DescribeEventAggregates](#) operation.

Contents

aggregateValue

The issue type for the associated count.

Type: String

Required: No

count

The number of events of the associated issue type.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventDescription

The detailed description of the event. Included in the information returned by the [DescribeEventDetails](#) operation.

Contents

latestDescription

The most recent description of the event.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventDetails

Detailed information about an event. A combination of an [Event](#) object, an [EventDescription](#) object, and additional metadata about the event. Returned by the [DescribeEventDetails](#) operation.

Contents

event

Summary information about the event.

Type: [Event](#) object

Required: No

eventDescription

The most recent description of the event.

Type: [EventDescription](#) object

Required: No

eventMetadata

Additional metadata about the event.

Type: String to string map

Key Length Constraints: Maximum length of 32766.

Value Length Constraints: Maximum length of 32766.

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)

- [Amazon SDK for Ruby V3](#)

EventDetailsErrorItem

Error information returned when a [DescribeEventDetails](#) operation can't find a specified event.

Contents

errorMessage

A message that describes the error.

Type: String

Required: No

errorName

The name of the error.

Type: String

Required: No

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\w-]+){3}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventFilter

The values to use to filter results from the [DescribeEvents](#) and [DescribeEventAggregates](#) operations.

Contents

availabilityZones

A list of Amazon Availability Zones.

Type: Array of strings

Length Constraints: Minimum length of 6. Maximum length of 18.

Pattern: `[a-z]{2}\-[0-9a-z\-\-]{4,16}`

Required: No

endTimes

A list of dates and times that the event ended.

Type: Array of [DateTimeRange](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

entityArns

A list of entity ARNs (unique identifiers).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1600.

Pattern: `.*{0,1600}`

Required: No

entityValues

A list of entity identifiers, such as EC2 instance IDs (i-34ab692e) or EBS volumes (vol-426ab23e).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1024.

Pattern: `.{0,1024}`

Required: No

eventArns

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

eventStatusCodes

A list of event status codes.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 6 items.

Valid Values: open | closed | upcoming

Required: No

eventTypeCategories

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

eventTypeCodes

A list of unique identifiers for event types. For example, `"AWS_EC2_SYSTEM_MAINTENANCE_EVENT"`, `"AWS_RDS_MAINTENANCE_SCHEDULED"`.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[^:/]{3,100}`

Required: No

lastUpdatedTimes

A list of dates and times that the event was last updated.

Type: Array of [DateTimeRange](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

regions

A list of Amazon Web Services Regions.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 2. Maximum length of 25.

Pattern: `[^:/]{2,25}`

Required: No

services

The Amazon Web Services services associated with the event. For example, EC2, RDS.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[^:/]{2,30}`

Required: No

startTimes

A list of dates and times that the event began.

Type: Array of [DateTimeRange](#) objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

tags

A map of entity tags attached to the affected entity.

Note

Currently, the tags property isn't supported.

Type: Array of string to string maps

Array Members: Maximum number of 50 items.

Map Entries: Maximum number of 50 items.

Key Length Constraints: Maximum length of 127.

Key Pattern: `.{0,127}`

Value Length Constraints: Maximum length of 255.

Value Pattern: `.{0,255}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventType

Contains the metadata about a type of event that is reported by Amazon Health. The EventType shows the category, service, and the event type code of the event. For example, an issue might be the category, EC2 the service, and AWS_EC2_SYSTEM_MAINTENANCE_EVENT the event type code.

You can use the [DescribeEventTypes](#) API operation to return this information about an event.

You can also use the Amazon CloudWatch Events console to create a rule so that you can get notified or take action when Amazon Health delivers a specific event to your Amazon Web Services account. For more information, see [Monitor for Amazon Health events with Amazon CloudWatch Events](#) in the *Amazon Health User Guide*.

Contents

category

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

code

The unique identifier for the event type. The format is `AWS_SERVICE_DESCRIPTION` ; for example, `AWS_EC2_SYSTEM_MAINTENANCE_EVENT`.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[a-zA-Z0-9_\-\-]{3,100}`

Required: No

service

The Amazon Web Services service that is affected by the event. For example, EC2, RDS.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[\^:/]{2,30}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

EventTypeFilter

The values to use to filter results from the [DescribeEventTypes](#) operation.

Contents

eventTypeCategories

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

eventTypeCodes

A list of event type codes.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[a-zA-Z0-9_\-\-]{3,100}`

Required: No

services

The Amazon Web Services services associated with the event. For example, EC2, RDS.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[^:/]{2,30}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationAffectedEntitiesErrorItem

Error information returned when a [DescribeAffectedEntitiesForOrganization](#) operation can't find or process a specific entity.

Contents

awsAccountId

The 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

errorMessage

A message that describes the error. Follow the error message and retry your request.

For example, the `InvalidAccountInputError` error message appears if you call the `DescribeAffectedEntitiesForOrganization` operation and specify the `AccountSpecific` value for the `EventScopeCode` parameter, but don't specify an Amazon Web Services account.

Type: String

Required: No

errorName

The name of the error.

Type: String

Required: No

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/  
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationEntityAggregate

The aggregate results of entities affected by the specified event in your organization. The results are aggregated by the entity status codes for the specified set of accountIDs.

Contents

accounts

A list of entity aggregates for each of the specified accounts in your organization that are affected by a specific event. If there are no `awsAccountIds` provided in the request, this field will be empty in the response.

Type: Array of [AccountEntityAggregate](#) objects

Required: No

count

The number of entities for the organization that match the filter criteria for the specified events.

Type: Integer

Required: No

eventArn

A list of event ARNs (unique identifiers). For example: "arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-CDE456", "arn:aws:health:us-west-1::event/EBS/AWS_EBS_LOST_VOLUME/AWS_EBS_LOST_VOLUME_CHI789_JKL101"

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

statuses

The number of affected entities aggregated by the entity status codes.

Type: String to integer map

Valid Keys: IMPAIRED | UNIMPAIRED | UNKNOWN | PENDING | RESOLVED

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationEvent

Summary information about an event, returned by the [DescribeEventsForOrganization](#) operation.

Contents

arn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

endTime

The date and time that the event ended.

Type: Timestamp

Required: No

eventScopeCode

This parameter specifies if the Amazon Health event is a public Amazon Web Services service event or an account-specific event.

- If the `eventScopeCode` value is `PUBLIC`, then the `affectedAccounts` value is always empty.
- If the `eventScopeCode` value is `ACCOUNT_SPECIFIC`, then the `affectedAccounts` value lists the affected Amazon Web Services accounts in your organization. For example, if an event affects a service such as Amazon Elastic Compute Cloud and you have Amazon Web Services accounts that use that service, those account IDs appear in the response.

- If the `eventScopeCode` value is `NONE`, then the `eventArn` that you specified in the request is invalid or doesn't exist.

Type: String

Valid Values: `PUBLIC` | `ACCOUNT_SPECIFIC` | `NONE`

Required: No

eventTypeCategory

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

eventTypeCode

The unique identifier for the event type. The format is `AWS_SERVICE_DESCRIPTION`. For example, `AWS_EC2_SYSTEM_MAINTENANCE_EVENT`.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[a-zA-Z0-9_\-\-]{3,100}`

Required: No

lastUpdatedTime

The most recent date and time that the event was updated.

Type: Timestamp

Required: No

region

The Amazon Web Services Region name of the event.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 25.

Pattern: `[\^:/]{2,25}`

Required: No

service

The Amazon Web Services service that is affected by the event, such as EC2 and RDS.

Type: String

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[\^:/]{2,30}`

Required: No

startTime

The date and time that the event began.

Type: Timestamp

Required: No

statusCode

The most recent status of the event. Possible values are `open`, `closed`, and `upcoming`.

Type: String

Valid Values: `open` | `closed` | `upcoming`

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)

- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationEventDetails

Detailed information about an event. A combination of an [Event](#) object, an [EventDescription](#) object, and additional metadata about the event. Returned by the [DescribeEventDetailsForOrganization](#) operation.

Contents

awsAccountId

The 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

event

Summary information about an Amazon Health event.

Amazon Health events can be public or account-specific:

- *Public events* might be service events that are not specific to an Amazon Web Services account. For example, if there is an issue with an Amazon Web Services Region, Amazon Health provides information about the event, even if you don't use services or resources in that Region.
- *Account-specific* events are specific to either your Amazon Web Services account or an account in your organization. For example, if there's an issue with Amazon Elastic Compute Cloud in a Region that you use, Amazon Health provides information about the event and the affected resources in the account.

You can determine if an event is public or account-specific by using the `eventScopeCode` parameter. For more information, see [eventScopeCode](#).

Type: [Event](#) object

Required: No

eventDescription

The detailed description of the event. Included in the information returned by the [DescribeEventDetails](#) operation.

Type: [EventDescription](#) object

Required: No

eventMetadata

Additional metadata about the event.

Type: String to string map

Key Length Constraints: Maximum length of 32766.

Value Length Constraints: Maximum length of 32766.

Required: No

See Also

For more information about using this API in one of the language-specific Amazon SDKs, see the following:

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationEventDetailsErrorItem

Error information returned when a [DescribeEventDetailsForOrganization](#) operation can't find a specified event.

Contents

awsAccountId

Error information returned when a [DescribeEventDetailsForOrganization](#) operation can't find a specified event.

Type: String

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

errorMessage

A message that describes the error.

If you call the `DescribeEventDetailsForOrganization` operation and receive one of the following errors, follow the recommendations in the message:

- We couldn't find a public event that matches your request. To find an event that is account specific, you must enter an Amazon Web Services account ID in the request.
- We couldn't find an account specific event for the specified Amazon Web Services account. To find an event that is public, you must enter a null value for the Amazon Web Services account ID in the request.
- Your Amazon Web Services account doesn't include the Amazon Web Services Support plan required to use the Amazon Health API. You must have either a Business, Enterprise On-Ramp, or Enterprise Support plan.

Type: String

Required: No

errorName

The name of the error.

Type: String

Required: No

eventArn

The unique identifier for the event. The event ARN has the `arn:aws:health:event-region::event/SERVICE/EVENT_TYPE_CODE/EVENT_TYPE_PLUS_ID` format.

For example, an event ARN might look like the following:

```
arn:aws:health:us-east-1::event/EC2/EC2_INSTANCE_RETIREMENT_SCHEDULED/
EC2_INSTANCE_RETIREMENT_SCHEDULED_ABC123-DEF456
```

Type: String

Length Constraints: Maximum length of 1600.

Pattern: `arn:aws(-[a-z]+(-[a-z]+)?)?:health:[^:]*:[^:]*:event(?:/[\\w-]+){3}`

Required: No

See Also

- [Amazon SDK for C++](#)
- [Amazon SDK for Java V2](#)
- [Amazon SDK for Ruby V3](#)

OrganizationEventFilter

The values to filter results from the [DescribeEventsForOrganization](#) operation.

Contents

awsAccountIds

A list of 12-digit Amazon Web Services account numbers that contains the affected entities.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Maximum length of 12.

Pattern: `^\S+$`

Required: No

endTime

A range of dates and times that is used by the [EventFilter](#) and [EntityFilter](#) objects. If `from` is set and `to` is set: match items where the timestamp (`startTime`, `endTime`, or `lastUpdatedTime`) is between `from` and `to` inclusive. If `from` is set and `to` is not set: match items where the timestamp value is equal to or after `from`. If `from` is not set and `to` is set: match items where the timestamp value is equal to or before `to`.

Type: [DateTimeRange](#) object

Required: No

entityArns

A list of entity ARNs (unique identifiers).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1600.

Pattern: `.{0,1600}`

Required: No

entityValues

A list of entity identifiers, such as EC2 instance IDs (i-34ab692e) or EBS volumes (vol-426ab23e).

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 99 items.

Length Constraints: Maximum length of 1024.

Pattern: `.{0,1024}`

Required: No

eventStatusCodes

A list of event status codes.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 6 items.

Valid Values: `open` | `closed` | `upcoming`

Required: No

eventTypeCategories

A list of event type category codes. Possible values are `issue`, `accountNotification`, or `scheduledChange`. Currently, the `investigation` value isn't supported at this time.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 255.

Valid Values: `issue` | `accountNotification` | `scheduledChange` | `investigation`

Required: No

eventTypeCodes

A list of unique identifiers for event types. For example, `"AWS_EC2_SYSTEM_MAINTENANCE_EVENT"`, `"AWS_RDS_MAINTENANCE_SCHEDULED"`.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 3. Maximum length of 100.

Pattern: `[^:/]{3,100}`

Required: No

lastUpdatedTime

A range of dates and times that is used by the [EventFilter](#) and [EntityFilter](#) objects. If `from` is set and `to` is set: match items where the timestamp (`startTime`, `endTime`, or `lastUpdatedTime`) is between `from` and `to` inclusive. If `from` is set and `to` is not set: match items where the timestamp value is equal to or after `from`. If `from` is not set and `to` is set: match items where the timestamp value is equal to or before `to`.

Type: [DateTimeRange](#) object

Required: No

regions

A list of Amazon Web Services Regions.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 2. Maximum length of 25.

Pattern: `[^:/]{2,25}`

Required: No

services

The Amazon Web Services services associated with the event. For example, EC2, RDS.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Length Constraints: Minimum length of 2. Maximum length of 30.

Pattern: `[^:/]{2,30}`

Required: No

startTime

A range of dates and times that is used by the [EventFilter](#) and [EntityFilter](#) objects. If `from` is set and `to` is set: match items where the timestamp (`startTime`, `endTime`, or `lastUpdatedTime`) is between `from` and `to` inclusive. If `from` is set and `to` is not set: match items where the timestamp value is equal to or after `from`. If `from` is not set and `to` is set: match items where the timestamp value is equal to or before `to`.

Type: [DateTimeRange](#) object

Required: No

Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see [Signing Amazon API requests](#) in the *IAM User Guide*.

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: *access_key/YYYYMMDD/region/service/aws4_request*.

For more information, see [Create a signed Amazon API request](#) in the *IAM User Guide*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Elements of an Amazon API request signature](#) in the *IAM User Guide*.

Type: string

Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to Amazon Security Token Service (Amazon STS). For a list of services that support temporary security credentials from Amazon STS, see [Amazon Web Services services that work with IAM](#) in the *IAM User Guide*.

Condition: If you're using temporary security credentials from Amazon STS, you must include the security token.

Type: string

Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Create a signed Amazon API request](#) in the *IAM User Guide*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

Common Errors

This section lists the errors common to the API actions of all Amazon services. For errors specific to an API action for this service, see the topic for that API action.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 400

IncompleteSignature

The request signature does not conform to Amazon standards.

HTTP Status Code: 400

InternalFailure

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

InvalidAction

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

InvalidClientId

The X.509 certificate or Amazon access key ID provided does not exist in our records.

HTTP Status Code: 403

NotAuthorized

You do not have permission to perform this action.

HTTP Status Code: 400

OptInRequired

The Amazon access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationError

The input fails to satisfy the constraints specified by an Amazon service.

HTTP Status Code: 400
